The Risk factors have been determined and disclosed on the basis of their materiality. The following factors have been considered for determining the materiality:

1. Some events may have material impact quantitatively;

4. Some events may not be material at present but may be having material impact in future.

INTERNAL RISK FACTORS

1. Our business is subject to government policies. If we fail to comply with the applicable regulations prescribed by governments and regulatory agencies, our business, results of operations and financial condition could be adversely affected.

We operate in a regulated industry and our operations are subject to regulation by Bio-fuel Authority of Government and Rajasthan State Government as our factory is situated in Rajasthan. We have ongoing obligations under National Policy on Bio-Fuels and Rajasthan Biofuels Rules, 2019. The penalties for non-adherence with these regulations can be severe, including the revocation or suspension of our business license, imposition of fines in those jurisdictions. If any non-adherence persists in our manufacturing process, the relevant regulator may amend or withdraw our existing approvals to manufacture and market our products in such jurisdiction, which could adversely affect our business, financial condition and results of operations.

If we fail to comply with applicable statutory or regulatory requirements, there could be a delay in the submission or grant of renewal for the manufacturing of our products. Moreover, if we fail to comply with the various conditions attached to such

approvals, licenses, registrations and permissions once received, the relevant regulatory body may suspend, curtail or revoke our ability to market such products or impose fines upon us which will adversely affect operation of our Company.

For further details of our Business, please refer to chapter titled "Business Overview" beginning on page 84 of this Prospectus.

2. If we are not able to obtain, renew or maintain the statutory and regulatory permits and approvals required to operate our business it may have a material adverse effect on our business.

We require certain statutory and regulatory permits, licenses and approvals to operate our business. Though we believe that we have obtained other permits and licenses which are adequate to run our business, we cannot assure that there is no other statutory/regulatory requirement which we are required to comply with. Further, some of these approvals are granted for fixed periods of time and need renewal from time to time. We are required to renew such permits, licenses and approvals. There can be no assurance that the relevant authorities will issue any of such permits or approvals in time or at all. Failure by us to renew, maintain or obtain the required permits or approvals in time may result in the interruption of our operations and may have a material adverse effect on our business. Our operations are subject to many environmental laws and regulations in Rajasthan in which we operate. Further our Company is in process of application for Registration under Provident Fund, Employee state Insurance, Shop & Establishment and Professional Tax.

Additionally, we believe that we will be able to renew or obtain such registrations and approvals or permissions, as and when required, there can be no assurance that the relevant authorities will renew or issue any such registrations or approvals in the time frame anticipated by us or at all. If we are unable to renew, maintain or obtain the required registrations or approvals, it may result in the interruption of our operations and may have a material adverse effect on our revenues, profits and operations.

For further details, see section on "Government and Other Approvals" beginning on page 180 of the Prospectus.

3. There are outstanding legal proceedings involving our Company and Director/Promoter. Any adverse decision in such proceedings may have a material adverse effect on our business, results of operations and financial condition.

We are involved in certain legal proceedings which are pending at different levels of adjudication before various courts, tribunals, enquiry officers, and appellate authorities.

We cannot provide assurance that these legal proceedings will be decided in our favour. Any adverse decisions in any of the proceedings may have a significant adverse effect on our business, results of operations, cash flows and financial condition. A summary of the pending civil and other proceedings involving the Company is provided below:

The amounts claimed in these proceedings have not been disclosed as the same is not ascertainable. If any new developments arise, such as a change in Indian law or rulings against us by appellate courts or tribunals, we may need to make provisions in our financial statements that could increase our expenses and current liabilities. For further details of legal proceedings involving the Company, please see "Outstanding Litigations and Material Developments" beginning on page 176 of this Prospectus

4. We may face resistance to change from existing users of conventional fossil fuel.

We may face resistance from existing users of traditional conventional fuel to switch to bio-fuel, as such switching may require them to make certain changes to their existing fuel feeding equipment such as furnace, stove etc. and other operating patterns and

convenience. This could be perceived as a considerable factor for the users on the grounds of costs, man-power adaptability and training. The management, however, believes that the switching from traditional conventional fossil fuel to bio-fuel might not involve any considerable change except minor change in certain basic equipment. In view of our management, the existing customers who have switched to bio-fuel could make it swiftly without any reportable inconvenience. The benefits of bio-fuel are far more than some basic adaptation challenges.

For further details of our Business, please refer to chapter titled "Business Overview" beginning on page 84 of this Prospectus.

5. We have limited financial history and our prior period financial results may not accurately represent our future financial performance.

Our Company was incorporated in the year 2016-17 and was in trading business of bio-fuel from December, 2016 to May, 2019. Our Company has started the manufacturing operation after May, 2019, hence the Company has limited manufacturing history.

For the period ended July 31, 2021, our Company's Total Net Worth was Rs. 793.80 Lacs and for year ended March 31, 2021 our Company's Total Net Worth was Rs. 318.43 Lacs. For the year ended March 31, 2020 and March 31, 2019 our Company's Total Net Worth was Rs. 214.00 Lacs and Rs. 165.43 Lacs respectively.

For the period ended July 31, 2021, our Company's Restated Profit/(loss) was Rs. 51.65 Lacs and for year ended March 31, 2021 our Company's Restated Profit/(loss) was Rs. 104.43 Lacs. For the year ended March 31, 2020 and March 31, 2019 our Company's Restated Profit/(loss) was Rs. 48.57 & 57.77 Lacs respectively.

Our business prospects must be considered in light of the risks and uncertainties encountered by companies undergoing rapid growth in competitive markets. Although we have grown significantly our prior growth rates may not be sustainable or a good predictor of future operating results. This substantial growth has placed, and will continue to place, demands on our management and other resources and there is no assurance that these demands will be met successfully. We may not be able to increase revenue or maintain profitability on a quarterly or an annual basis. If this occurs, our results of operations and financial condition will be adversely affected. Our growth exposes us to a wide range of increased risks. It will also place significant demands on our management, financial and other resources and will require us to continuously develop and improve our operational, financial and internal controls.

There can be no assurance that we will be able to successfully pursue our growth strategies, or that pursuing these strategies will provide us the anticipated benefits in terms of growth and profitability. Further, we may be unable to develop adequate systems, infrastructure and technologies, devote sufficient financial resources or develop and attract talent to manage our growth. Our inability to pursue our growth strategies successfully or at all, or an inability to manage our growth, may adversely affect our prospects.

For further details of our financial data, Please refer to chapter titled "Financial Information of our Company" beginning on Page 124 of this Prospectus.

6. The availability, quality and timely delivery of raw material is an important factor for our business, any fluctuation, delay or increase in cost in same may affect our business and prices.

Our basic raw material is threefold (a) Vegetable Oil, (b) Mutton Tallow and (c) Used Cooking Oil, (d) Methanol etc. We procure these materials from our suppliers. Any failure of our suppliers to deliver wastes in the necessary quantities or to adhere to delivery schedules would adversely affect our production processes and our ability to deliver orders on time and at the desired level of quality. Any material shortage or interruption in the supply of raw material due to natural causes or other factors could impact production, which in turn would have a material adverse effect on our growth and operations. Further, increase in prices of raw material shall lead to an increase in cost of production, thereby increasing the price of our final product. This would have an adverse impact on our business, financial conditions and results of operations.

For further details of our raw material, please refer to chapter titled "Business Overview" beginning on page 84 of this Prospectus.

7. Prices of bio-fuel might be more than non-renewable conventional fossil fuel. Moreover, decline in price of fossil fuel may affect the demand for bio-fuel.

Prices of bio-fuel could, at times, be more than non-renewable conventional fossil fuel such as coal. Moreover, bio-fuel are not a substitute of liquid conventional fossil fuel. Further, there remains some risk that the price of fossil fuels such as crude prices, could decline, rendering bio-fuels further non-competitive. Our management believes that the overall cost-benefit should be in favor of bio-fuel considering the renewability of energy and environmental aspects of bio-fuel. Our Company has broad-based

production of bio-fuels by making bio-diesel, which is a substitute of liquid conventional fossil fuel. Further, prices of bio-fuel are relatively much cheaper with more efficient output. Besides, bio-fuel could be said to be superior fuel compared to conventional fossil fuels on account of renewability, efficiency and environmental implications.

For further details of our products, please refer to chapter titled "Business Overview" beginning on page 84 of this Prospectus.

8. Absence of entry barriers into bio-fuel production may attract many players from both organized and unorganized sectors which will escalate competition and resultant price pressure on the products.

There are no entry barriers for setting up bio-fuel production unit(s). Plant and machinery required for setting up a bio-fuel unit could be easily made and installed at low cost and less time. Further, in order to promote bio-fuel culture in our country, the Government provides various incentives and exemptions to companies engaged in this business. Thus, due to such exemptions, incentives and low entry barriers, many players from the organized as well as the un-organized sector may enter this industry. The entry of these players may result in competition and resultant price pressure on the products. The management, however, believes that setting up of a sustainable bio-fuel unit is dependent on several factors which are the cornerstones of the Company's business model including critical factors as promoter hands-on experience and ground-level understanding of the minute details such as variants of wastes as raw materials, moisture contents, mixture of different variants, etc.

For further details of our Business, please refer to chapter titled "Business Overview" beginning on page 84 of this Prospectus.

9. Our Company has entered into marketing agreement for statics and mobile outlets for providing bio-fuel to the retailers. Any contravene by retailers under the agreements will impact the business operation of our company.

Our Company has entered into marketing agreement for statics and mobile outlets for providing bio-fuel to various retailers on certain terms and conditions as specified in the agreement which includes supply and sale of bio-fuels through static and mobile outlets, premises setup of retail outlet by retailers, terms related to pricing and payments, maintenance of retail outlet etc. We are required to provide bio-fuel to the retailers under the agreement. If we fail to complete the supply to them or our retailer failed to successfully implement the statics and mobile sale for biofuel, it will impact the financial position and business of our company.

In addition, any delays in the manufacturing process could affect our supply to the retail outlet. In the event that we do not complete our delivery on time or at all, we may be liable for reduction of sale. Any such inability of ours to complete the obligation and by our retailers in a timely manner could adversely affect our business, financial condition and results of operations.

For further details of our Business, please refer to chapter titled "Business Overview" beginning on page 84 of this Prospectus.

10. We do business with our customers on purchase order basis and do not have long-term contracts with them.

Our business is conducted on purchase order basis, depending on customer requirements for energy generation. We do not have long-term contracts with our customers and there can be no assurance that we will continue to receive repeat orders from any of them. Further, even if we were to continue receiving orders from our customers, there can be no assurance that they will be on the same terms, and the new terms may be less favorable to us than those under the present terms. Our management attempts to ensure customer satisfaction and continuing repeat orders from them endorse our attempts.

For further details of our business, please refer to chapter titled "Business Overview" beginning on page 84 of this Prospectus.

11. The property used by the Company for the purpose of its operations is not owned by us. Any termination of the relevant lease or leave and license agreement in connection with such property or our failure to renew the same could adversely affect our operations.

We currently operate from our registered office, located at A-3, 2nd Floor, Shree Ganesh Nagar, Housing Society, Ramakaka Temple Road, Chhani, Vadodara-391740, Gujarat, India and the same is not owned by us. We have obtained this property on leave and license basis from our Director through Leave and License Agreement dated June 05, 2019 starting from the date of agreement for a period of 60 months. The agreement is valid through June 04, 2024. This office is owned by one of our Directors and has been acquired by us on a medium term rental basis. Also the leave and license is not registered with regulatory authority. Any termination of the lease and/or rental deed in connection with this property or our failure to renew the same, and upon favourable conditions, in a timely manner or at all could adversely affect our operations. For details regarding properties taken on lease refer the Section titled —Properties under "Business Overview" beginning on page no. 84 of this Prospectus.

Also, the owners of the above property have also leased part of the office to our Group Company. A shared office presents certain issues like lack of privacy and space constraints. If the owners decide to allot bigger space to our Group Company, we may not be

able to operate freely and conveniently causing operational hindrances. Also, if the owners decide to rent the entire office to other entities, we may not be able to find a replacement office in a reasonable timeframe, on terms favourable to us or at all.

12. Any delay in production at, or shutdown of our manufacturing facilities, could adversely affect our business, results of operations and financial condition.

The success of our manufacturing activities depends on, among other things, the productivity of our workforce, compliance with regulatory requirements and the continued functioning of our manufacturing processes and machinery. Disruptions in our manufacturing activities could delay production or require us to shut down the affected manufacturing facility. Moreover, our products are permitted to be manufactured at our factory that have received specific approvals, and any shut down of such factory will result in us being unable to manufacture such products for the duration of such shut down. Such an event will result in us being unable to meet with our contractual commitments, which will have an adverse effect on our business, results of operation and financial condition.

Additionally, any interruption at our manufacturing facility, including natural or man-made disasters, workforce disruptions, regulatory approval delays, fire or the failure of machinery, could reduce our ability to meet the demand, which could affect our business prospects, results of operations and financial condition. We have implemented industry acceptable risk management controls at our manufacturing location and continuously seek to upgrade them, the risk of fire or explosion associated with these materials cannot be completely eliminated.

13. Our top ten customers contribute majority of our revenues from operations. Any loss of business from one or more of them may adversely affect our revenues and profitability.

Our top ten customers have contributed 87.66% of our revenues for the period ended July 31, 2021 based on Restated Financial Statements. However, our top customers may vary from period to period depending on the demand and thus the composition and revenue generated from these customers might change as we continue to add new customers in normal course of business. Since our business is concentrated among relatively few significant customers, we could experience a reduction in our results of operations, cash flows and liquidity if we lose one or more of these customers or the amount of business we obtain from them is reduced for any reason, including but not limited on account of any dispute or disqualification.

Accordingly, we cannot assure you that the customers which contribute to the major part of our revenue stream will pay us the amounts due to us on time, or at all. In the event any of our significant customers fail to fulfil their respective obligations, our business, financial condition and results of operations would be adversely affected. While we believe we have maintained good and long term relationships with our customers, there can be no assurance that we will continue to have such long term relationship with them. We cannot assure that we shall generate the same quantum of business, or any business at all, from these customers, and loss of business from one or more of them may adversely affect our revenues and profitability.

14. Our top ten suppliers contribute majority of our purchases. Any loss of business with one or more of them may adversely affect our business operations and profitability.

Our top ten suppliers contributed approximately 99.19% of our total purchases for the period ended July 31, 2021 based on Restated Financial Statements. However, our top suppliers may vary from period to period depending on the demand-supply mechanism and thus the supply process from these suppliers might change as we continue to seek more cost effective suppliers in normal course of business. Since our business is concentrated among relatively few significant suppliers, we could experience a reduction in our purchases and business operations if we lose one or more of these suppliers, including but not limited on account of any dispute or disqualification. Further Our Company was in trading business of bio-fuels from its incorporation till May, 2021 and 100% of its purchases was from its Group Company i.e. Yamuna Bio Energy Private Limited.

While we believe we have maintained good and long term relationships with our other suppliers too, there can be no assurance that we will continue to have such long term relationship with them. We cannot assure that we shall do the same quantum of business, or any business at all, with these customers, and loss of business with one or more of them may adversely affect our purchases and business operations.

15. The COVID-19 pandemic, or any future pandemic or widespread public health emergency, could materially and adversely impact our business, financial condition, cash flows and results of operations.

Since first being reported in December 2019, the outbreak of COVID-19 has spread globally. The World Health Organization declared the outbreak of COVID-19 to be a public health emergency of international concern in January 2020, and a global pandemic in March 2020.

The COVID-19 pandemic has had, and any future pandemic or widespread public health emergency could have, repercussions across regional and global economies and financial markets. The outbreak of COVID-19 in many countries, including India has significantly and adversely impacted economic activity and has contributed to significant volatility and negative pressure in financial markets, and it is possible that the outbreak of COVID-19 will cause a prolonged global economic crisis, recession or depression, despite monetary and fiscal interventions by governments.

The global impact of the outbreak has been rapidly evolving. Most of the jurisdictions, including where we have business operation, have reacted by instituting restrictive measures including invoking lock-downs and quarantines, requiring the closure of non-essential businesses and placing restrictions on the types of businesses.

The full extent to which the COVID-19 pandemic, or any future pandemic or widespread public health emergency impacts our business, operations and financial results will depend on numerous evolving factors that we may not be able to accurately predict, including: the scope, severity, and duration of the pandemic; actions taken by governments, business and individuals in response to the pandemic; disruptions or restrictions on our employees' ability to work and travel; any extended period of remote work arrangements; and strain on our or business continuity plans, and resultant operational risk. The COVID-19 pandemic, or any future pandemic or widespread public health emergency could therefore materially and adversely impact our business, financial condition, cash flows and results of operations.

16. Our failure to adapt to technological developments or industry trends could affect the performance and features of our products, and reduce demand of our customers.

As our operations grow in scope and size, we must continuously improve, upgrade, adapt and expand our systems and infrastructure to offer our customers enhanced products, features and functionality ahead of rapidly evolving customer demands, while maintaining the reliability and integrity of our systems and infrastructure in a cost-efficient and competitive manner. The systems, infrastructure and technologies we currently employ may become obsolete or be unable to support our increased size and scale. Even if we are able to maintain, upgrade or replace our existing systems or innovate or customize and develop new technologies and systems, we may not be as quick or efficient as our competitors in upgrading or replacing our systems. We may be unable to devote adequate financial resources or obtain sufficient financing on commercially acceptable terms in time, or at all, which may have a material adverse effect on our business, prospects, results of operation and financial condition. For further details regarding our business, please refer to chapter titled "Business Overview" beginning on Page 84 of this Prospectus.

17. We have a substantial amount of outstanding indebtedness, which requires significant cash flows to service and are subject to certain conditions and restrictions in terms of our financing arrangements, which restricts our ability to conduct our business and operations in the manner we desire.

As of July 31, 2021, our long term borrowings were ₹578.74 Lacs & short term borrowings were ₹ 255.37 Lacs and we will continue to incur additional indebtedness in the future. Our level of indebtedness has important consequences to us, such as:

- increasing our vulnerability to general adverse economic, industry and competitive conditions;
- limiting our ability to borrow additional amounts in the future;
- affecting our capital adequacy requirements; and
- Increasing our finance costs.

In the event we breach any financial or other covenants contained in any of our financing arrangements or in the event we had breached any terms in the past which is noticed in the future, we may be required to immediately repay our borrowings either in whole or in part, together with any related costs. If the lenders of a material amount of the outstanding loans declare an event of default simultaneously, our Company may be unable to pay its debts when they fall due. For further details of our Company's borrowings, Please refer "Financial Information of our Company" on page 124 of this Prospectus.

18. We do not have any long-term agreement or contract for supply of raw materials & consequently are exposed to price and supply fluctuations for our raw materials.

We are, to a major extent, dependent on external suppliers for our raw materials requirements and we do not have any long-term supply agreements or commitments in relation to the same or for any other raw materials used in our manufacturing process. Consequently, we are exposed to price and supply fluctuations in raw materials, and these fluctuations may adversely affect our ability to obtain orders and/or to execute them in a timely manner, which would have a material adverse effect on our business, results of operations and financial condition.

In case of non-availability of raw materials on favorable terms we may have to procure the same at the terms and conditions prevalent at that point. This will result in reducing our revenues by a considerable amount due to shortage of raw material or due

to inability to procure the same. Further, unfavorable terms of raw materials may also force us to reduce the scale of our operations resulting in a down-sizing of our overall business. We may have to put on hold any expansion plans and our business will be adversely affected.

For details of our raw material, please refer section titled "Business Overview" beginning on Page 84 of this Prospectus.

19. There are certain discrepancies and non-compliances noticed in some of our corporate records relating to forms filed with the Registrar of Companies.

In the past, our company has submitted the forms with registrar of Companies with some factual discrepancy and errors. In Addition to that our Company has made non-compliance with provisions of Companies Act in respect of private placement made by the Company in past and also forms are lately filed with requisite additional fees in registrar of companies. Although no show cause notice have been issued against our Company till date in respect of above, in the event of any cognizance being taken by the concerned authorities in respect of above, actions may be taken against our Company and its directors, in which event the financials of our Company and our directors may be affected. Also with the expansion of our operations there can be no assurance that deficiencies in our internal controls and compliances will not arise, or that we will be able to implement, and continue to maintain, adequate measures to rectify or mitigate any such deficiencies in our internal controls, in a timely manner or at all.

20. If we are not successful in managing our growth, our business may be disrupted and our profitability may be reduced.

We have experienced sustainable growth in recent years and expect our businesses to continue to grow significantly. Our future growth is subject to risks arising from a rapid increase in volume, and inability to retain and recruit skilled staff.

Our future growth may place significant demands on our management and operations and require us to continuously evolve and improve our financial, operational and other internal controls within our Company. In particular, continued expansion may pose challenges in:

- maintaining high levels of quality control, cost effective manufacturing, and customer satisfaction;
- recruiting, training and retaining sufficient skilled management and technical personnel for our manufacturing process;
- developing and improving our internal administrative infrastructure, particularly our financial,
- operational, communications, internal control and other internal systems;
- making accurate assessments of the resources;
- adhering to the standards of health, safety and environment and quality and process execution to meet clients' expectations;
- strengthening internal control and ensuring compliance with legal and contractual obligations;
- managing relationships with customers, suppliers and lenders.

If we are not successful in managing our growth, our business may be disrupted and profitability may be reduced. Our business, prospects, financial condition and results of operations may be adversely affected.

21. The unsecured loan availed by our Company from Director and Promoter may be recalled at any given point of time.

Our Company has been availing unsecured loans from Director and Promoter from time to time. The total outstanding payable to them as on July 31, 2021 amounts to Rs. 344.57 Lacs. Although there are no terms and condition prescribed for repayment of unsecured loan from our Director and Promoter which can be recalled at any given point of time during ordinary course of business and thus may affect the business operations and financial performance of our Company.

For further details regarding loans availed by our Company, please refer "Financial Information of our Company" on page 124 of this Prospectus.

22. Any failure to comply with financial and other restrictive covenants imposed on us under our financing agreements may affect our operational flexibility, business, results of operations and prospects.

As on July 31, 2021, our total secured borrowings amounted to Rs. 298.48 Lacs from Indian Overseas Bank. Our leverage has several important consequences, including the following:

- A portion of our cash flow will be used towards repayment of debt, which will reduce the availability of cash to fund working capital requirements, capital expenditures and other general corporate purposes;

- Our borrowing cost and the existence of encumbrances on a significant portion of our immovable properties may constrain. In the event of enforcement of an event of default in connection with such secured borrowings (which is not waived or cured), our ability to continue to operate our business at such locations may be restricted;

- Fluctuations in interest rates may affect our cost of borrowing, as all or a substantial part of our borrowings is at floating rates of interest; and

- Our financing agreements require us to obtain the consent of, or to intimate, our lenders for certain actions including change in shareholding or directorship of our Company, remuneration to Directors, drawdown of further loans, issuance of guarantees, and for certain corporate actions, including alterations to our Memorandum and Articles of Association, Payment of Dividend and balance of unsecured loan of Director. Our failure to comply with financial or restrictive covenants or periodic reporting requirements or to obtain our lenders' consent to take certain actions in a timely manner or at all may result in declaration of an event of default by any current or future lenders, which may accelerate repayment or increase applicable interest rates or trigger cross-default or cross-acceleration under other financing agreements.

The termination of, or declaration or enforcement of default under, any current or future financing agreement (if not waived or cured) may affect our ability to raise additional funds or renew maturing borrowings to finance our existing operations and pursue our growth initiatives and, therefore, have an effect on our business, results of operations and prospects.

For further details of our loans, Please refer chapter titled "Financial Information of our Company" beginning on Page 124 of this Prospectus.

23. One of our Directors do not have documents for their educational qualifications, as disclosed in the section entitled "Our Management".

In accordance with the disclosure requirements stipulated under the SEBI Regulations, the brief biographies of our Director, Bhaviniben Gaurang Shah disclosed in the section entitled "Our Management" on page 107 of this Prospectus include details of their educational qualifications. However, the original documents evidencing such educational qualifications are not available with respect of our Director. Accordingly, we have relied on affidavits provided by such Director to verify the authenticity of such disclosures.

24. We have entered into and may enter into related party transactions in the future also.

Our Company in the past has entered into Related Party Transactions and may continue to do so in future also, which may affect our competitive edge. Our Company had entered into various transactions with our Promoter, Promoter Group, Directors, their Relatives and Group Company. These transactions, inter-alia includes salary, remuneration, loans and advances, and Purchase of Raw material etc. Our Company entered into such transactions due to easy proximity and quick execution.

However, there is no assurance that we could not have obtained better and more favorable terms that our Company not entered into such related party transactions. Our Company may enter into such transactions in future also and we cannot assure that in such an event there would be no adverse effect on results of our operations. For details please refer to Annexure 33 on Related Party Transactions of the Auditor's Report under Section titled "Financial Information of our Company" beginning on page no. 124 of this Prospectus

25. Our Promoter, Directors and other has provided personal guarantees and personal property for loans availed by our Company. Our business, financial condition, results of operations, cash flows and prospects may be adversely affected by the invocation of all or any personal guarantees & Personal Properties.

Our Promoter and Directors has provided personal guarantees and personal property to secure a significant portion of our existing borrowings, and may post listing continue to provide such guarantees and other security. Also our business associate has also given personal guarantees and personal property for loan from Indian Overseas Bank. In case of a default under our loan agreements, any of the personal guarantees & personal properties provided by our Promoter, Directors & Other may be invoked, which could negatively impact the reputation of our Company. Also, we may face certain impediments in taking decisions in relation to our Company, which in turned would result in a material adverse effect on our financial condition, business, results of operations and prospects and would negatively impact our reputation.

In addition, our Promoter and Directors may be required to liquidate his shareholding in our Company to settle the claims of the lenders, thereby diluting his shareholding in our Company. Also if our Promoter, Directors and other revoke their personal guarantees and personal property and we may not be successful in procuring alternate guarantees and property satisfactory to the

lenders, as a result may need to repay outstanding amounts under such facilities or seek additional sources of capital, which could affect our financial condition and cash flows.

For further details regarding our shareholding, please refer to chapter titled "Capital Structure" beginning on Page 53 of this Prospectus.

58. Our Equity Shares have never been publicly traded and may experience price and volume fluctuations following the completion of the Issue, an active trading market for the Equity Shares may not develop, the price of our Equity Shares may be volatile and you may be unable to resell your Equity Shares at or above the Issue Price or at all.

Prior to the Issue, there has been no public market for our Equity Shares, and an active trading market may not develop or be sustained after the Issue. Listing and quotation does not guarantee that a market for our Equity Shares will develop or, if developed, the liquidity of such market for the Equity Shares. The Issue Price of the Equity Shares is determined considering various financials factors of the Company and may not be indicative of the market price of the Equity Shares at the time of commencement of trading of the Equity Shares or at any time thereafter. There has been significant volatility in the Indian stock markets in the recent past, and the trading price of our Equity Shares after this Issue could fluctuate significantly as a result of market volatility or due to various internal or external risks, including but not limited to those described in this Prospectus. A decrease in the market price of our Equity Shares could cause you to lose some or all of your investment

59. Rights of shareholders under Indian laws may be more limited than under the laws of other jurisdictions.

Indian legal principles related to corporate procedures, directors' fiduciary duties and liabilities may differ from those that would apply to a company in another jurisdiction. Investors may have more difficulty in asserting their rights as shareholders in an Indian company than as shareholder of a corporation in another jurisdiction. Shareholders' rights under Indian law may not be as extensive as shareholders' rights under the laws of other jurisdictions. Under the Companies Act, prior to issuance of any new equity shares, a public limited company incorporated under Indian law must offer its equity shareholders pre-emptive rights to subscribe to a proportionate number of equity shares to maintain existing ownership, unless such pre-emptive rights are waived by a special resolution by a three-fourths majority of the equity shareholders voting on such resolution. If you are a foreign investor and the law of the foreign jurisdiction that you are not permit the exercise of such pre-emptive rights without our filing an offering document or registration statement with the applicable authority in such foreign jurisdiction, you will be unable to exercise such pre-emptive rights, unless we make such a filing. If we elect not to file an offering document or a registration statement, the new securities may be issued to a custodian, who may sell the securities for your benefit. The value such custodian receives on the sale of any such securities and the related transaction costs cannot be predicted. To the extent that you are unable to exercise pre-emptive rights granted in respect of our Equity Shares, your proportional interest in our Company would decline.

60. The Issue Price of our Equity Shares may not be indicative of the market price of our Equity Shares after the Issue and the market price of our Equity Shares may decline below the Issue Price and you may not be able to sell your Equity Shares at or above the Issue Price.

The Issue Price of our Equity Shares has been determined on the basis of the Fixed Price Issue. This price is based on numerous factors. For further information, see "Basis for Issue Price" beginning on page 69 of this Prospectus and may not be indicative of the market price of our Equity Shares after the Issue. The market price of our Equity Shares could be subject to significant fluctuations after the Issue, and may decline below the Issue Price. We cannot assure you that you will be able to sell your Equity Shares at or above the Issue Price. Among the factors that could affect our share price are:

- Variations in the rate of growth of our financial indicators, such as earnings per share, net income and revenues;
- Changes in revenue or earnings estimates or publication of research reports by analysts;
- Speculation in the press or investment community;
- Domestic and international economic, legal and regulatory factors unrelated to our performance.

61. A third party could be prevented from acquiring control of our Company because of anti-takeover provisions under Indian law.

There are provisions in Indian law that may delay, deter or prevent a future takeover or change in control of our Company, even if a change in control would result in the purchase of your Equity Shares at a premium to the market price or would otherwise be beneficial to you. Such provisions may discourage or prevent certain types of transactions involving actual or threatened change in control of us. Under the takeover regulations in India, an acquirer has been defined as any person who, directly or indirectly, acquires or agrees to acquire shares or voting rights or control over a company, whether individually or acting in concert with others. Although these provisions have been formulated to ensure that interests of investors/shareholders are protected, these provisions may also discourage a third party from attempting to take control of our Company. Consequently, even if a potential takeover of our Company would result in the purchase of the Equity Shares at a premium to their market price or would otherwise be beneficial to its stakeholders, it is possible that such a takeover would not be attempted or consummated because of the Indian takeover regulations.

62. The requirements of being a listed company may strain our resources and distract management.

We have no experience as a listed company and have not been subjected to the increased scrutiny of our affairs by shareholders, regulators and the public that is associated with being a listed company. As a listed company, we will incur additional legal, accounting, corporate governance and other expenses that we did not incur as an unlisted company. We will be subject to the listing agreements with the Stock Exchanges and compliances of SEBI Listing Regulation, 2015 which would require us to file audited annual and unaudited semi-annual and limited review reports with respect to our business and financial condition. If we delay making such filings, we may fail to satisfy our reporting obligations and/or we may not be able to readily determine and accordingly report any changes in our results of operations as timely as other listed companies.

As a listed company, we will need to maintain and improve the effectiveness of our disclosure controls and procedures and internal control over financial reporting, including keeping adequate records of daily transactions to support the existence of effective disclosure controls and procedures, internal control over financial reporting and additional compliance requirements under the Companies Act, 2013. In order to maintain and improve the effectiveness of our disclosure controls and procedures and internal control over financial reporting, significant resources and management oversight will be required. As a result, management's attention may be diverted from other business concerns, which could adversely affect our business, prospects, financial condition and results of operations. In addition, we may need to hire additional legal and accounting staff with appropriate listed company experience and technical accounting knowledge and we cannot assure you that we will be able to do so in a timely manner.

63. We may require further equity issuance, which will lead to dilution of equity and may affect the market price of our Equity Shares or additional funds through incurring debt to satisfy our capital needs, which we may not be able to procure and any future equity offerings by us.

Our growth is dependent on having a balance sheet to support our activities. In addition to the IPO Proceeds and our internally generated cash flow, we may need other sources of financing to meet our capital needs which may include entering into new debt facilities with lending institutions or raising additional equity in the capital markets. We may need to raise additional capital from time to time, dependent on business conditions. The factors that would require us to raise additional capital could be business growth beyond what the current balance sheet can sustain; additional capital requirements imposed due to changes in regulatory regime or significant depletion in our existing capital base due to unusual operating losses. Any fresh issue of shares or convertible securities would dilute existing holders, and such issuance may not be done at terms and conditions, which are favourable to the existing shareholders of our Company. If our Company decides to raise additional funds through the incurrence of debt, our interest obligations will increase, and we may be subject to additional covenants, which could further limit our ability to access cash flows from our operations. Such financings could cause our debt to equity ratio to increase or require us to create charges or liens on our assets in favour of lenders. We cannot assure you that we will be able to secure adequate financing in the future on acceptable terms, in time, or at all. Our failure to obtain sufficient financing could result in the delay or abandonment of our expansion plans. Our business and future results of operations may be affected if we are unable to implement our expansion strategy.

Any future issuance of Equity Shares by our Company may dilute shareholding of investors in our Company; and hence affect the trading price of our Company's Equity Shares and its ability to raise capital through an issue of its securities. In addition, any perception by investors that such issuances or sales might occur could also affect the trading price of our Company's Equity Shares. Additionally, the disposal, pledge or encumbrance of Equity Shares by any of our Company's major shareholders, or the perception that such transactions may occur may affect the trading price of the Equity Shares. No assurance may be given that our Company will not issue Equity Shares or that such shareholders will not dispose of, pledge or encumber their Equity Shares in the future.

EXTERNAL RISK FACTORS

64. The occurrence of natural or man-made disasters could adversely affect our results of operations, cash flows and financial condition. Hostilities, terrorist attacks, civil unrest and other acts of violence could adversely affect the financial markets and our business.

The occurrence of natural disasters, including cyclones, storms, floods, earthquakes, tsunamis, tornadoes, fires, explosions, pandemic disease and man-made disasters, including acts of terrorism and military actions, could adversely affect our results of operations, cash flows or financial condition. Terrorist attacks and other acts of violence or war in India or globally may adversely affect the Indian securities markets. In addition, any deterioration in international relations, especially between India and its neighboring countries, may result in investor concern regarding regional stability which could adversely affect the price of the Equity Shares. In addition, India has witnessed local civil disturbances in recent years and it is possible that future civil unrest as well as other adverse social, economic or political events in India could have an adverse effect on our business. Such incidents could also create a greater perception that investment in Indian companies involves a higher degree of risk and could have an adverse effect on our business and the market price of the Equity Shares.

65. Our business and activities may be further regulated by the Competition Act and any adverse application or interpretation of the Competition Act could materially and adversely affect our business, financial condition and results of operations.

The Competition Act seeks to prevent business practices that have or are likely to have an appreciable adverse effect on competition in India and has established the Competition Commission of India (the "**CCI**"). Under the Competition Act, any arrangement, understanding or action, whether formal or informal, which has or is likely to have an appreciable adverse effect on competition is void and attracts substantial penalties. Any agreement among competitors which, directly or indirectly, determines purchase or sale prices, results in bid rigging or collusive bidding, limits or controls the production, supply or distribution of goods and services, or shares the market or source of production or providing of services by way of allocation of geographical area or type of goods or services or number of customers in the relevant market or in any other similar way, is presumed to have an appreciable adverse effect on competition and shall be void. Further, the Competition Act prohibits the abuse of a dominant position by any enterprise. If it is proven that a breach of the Competition Act committed by a company took place with the consent or connivance or is attributable to any neglect on the part of, any director, manager, secretary or other officer of such company, that person shall be guilty of the breach themselves and may be punished as an individual. If we, or any of our employees are penalized under the Competition Act, our business may be adversely affected. Further, the Competition Act also regulates combinations and requires approval of the CCI for effecting any acquisition of shares, voting rights, assets or control or mergers or amalgamations above the prescribed asset and turnover based thresholds.

On March 4, 2011, the Government of India notified and brought into force new provisions under the Competition Act in relation to combined entities (the "Combination Regulation Provisions"), which came into effect from June 1, 2011. The Combination Regulation Provisions require that any acquisition of shares, voting rights, assets or control or mergers or amalgamations, which cross the prescribed asset and turnover based thresholds, must be notified to and preapproved by the CCI. In addition, on May 11, 2011, the CCI issued the final Competition Commission of India (Procedure in regard to the transaction of business relating to combinations) Regulations, 2011 (as amended). These regulations, as amended, set out the mechanism for the implementation of the Combination Regulation Provisions under the Competition Act.

66. The Indian tax regime is currently undergoing substantial changes which could adversely affect our business.

The goods and service tax ("GST") that has been implemented with effect from July 1, 2017 combines taxes and levies by the GoI and state governments into a unified rate structure, and replaces indirect taxes on goods and services such as central excise duty, service tax, customs duty, central sales tax, state VAT, cess and surcharge and excise that were being collected by the GoI and state governments.

As regards the General Anti-Avoidance Rules ("GAAR"), The general anti avoidance rules ("GAAR") provisions have been made effective from assessment year 2018-19 onwards, i.e.; financial Year 2017-18. The GAAR provisions intend to declare an arrangement as an "impermissible avoidance arrangement", if the main purpose or one of the main purposes of such arrangement is to obtain a tax benefit, and satisfies at least one of the following tests (i) creates rights, or obligations, which are not ordinarily created between persons dealing at arm's length; (ii) results, directly or indirectly, in misuse, or abuse, of the provisions of the Income Tax Act, 1961; (iii) lacks commercial substance or is deemed to lack commercial substance, in whole or in part; or (iv) is entered into, or carried out, by means, or in a manner, that is not ordinarily engaged for bona fide purposes. If GAAR provisions are invoked, the tax authorities will have wider powers, including denial of tax benefit or a benefit under a tax treaty. In the absence of any precedents on the subject, the application of these provisions is uncertain. As the taxation regime in India is undergoing a significant overhaul, its consequent effects on economy cannot be determined at present and there can be no assurance that such effects would not adversely affect our business, future financial performance and the trading price of the Equity Shares.

67. Political, economic or other factors that are beyond our control may have an adverse effect on our business, results of operations and cash flows.

We currently operate only in India and are dependent on domestic, regional and market conditions. Our performance, growth and market price of our Equity Shares are and will be dependent on our industry of the Indian economy. There have been periods of slowdown in the economic growth of India. For instance, the situation of lock-down is prevailing in India due to pandemic Covid-19 spread in India and all other parts of world. If such condition prevails for longer time the Demand for our products may be adversely affected by an economic downturn in domestic, regional and global economies. India's economic growth is also affected by various other factors including domestic consumption and savings, balance of trade movements, namely export demand and movements in key imports, global economic uncertainty and liquidity crisis, volatility in exchange currency rates. Consequently, any future slowdown in the Indian economy could harm our business, results of operations, cash flows and financial condition. Also, a change in the Government or a change in the economic and deregulation policies could affect economic conditions prevalent in the areas in which we operate in general and our business in particular and high rates of inflation in India could increase our costs without proportionately increasing our revenues, and as such decrease our operating margins.

68. Companies in India are required to prepare financial statements under the new Indian Accounting Standards. In addition, all income-tax assesse in India will be required to follow the Income Computation and Disclosure Standards.

The Ministry of Corporate Affairs ("MCA"), Government of India, has through notification dated February 16, 2015 issued the Indian Accounting Standards Rules, 2015 ("Ind AS") which have come into effect from April 1, 2015 and are applicable to companies which fulfill certain conditions. Further, there can be no assurance that the adoption of Ind AS will not affect our reported results of operations or financial condition. Any of these factors relating to the use of Ind AS may adversely affect our financial condition and results of operations.

Further, the Ministry of Finance, Government of India has issued a notification dated September 29, 2016 notifying Income Computation and Disclosure Standards ("ICDS"), thereby creating a new framework for computation of taxable income. The ICDS shall apply from the assessment year 2017-2018 and subsequent years. The adoption of ICDS is expected to significantly alter the way companies compute their taxable income, as ICDS deviates from several concepts that are followed under general accounting standards, including Indian GAAP and Ind AS. In addition, ICDS shall be applicable for the computation of income for tax purposes but shall not be applicable for the computation of income for minimum alternate tax. There can be no assurance that the adoption of ICDS will not adversely affect our business, results of operations and financial condition.

69. Significant differences exist between Indian GAAP and other accounting principles, such as U.S. GAAP and IFRS, which investors may be more familiar with and may consider material to their assessment of our financial condition.

Our financial statements are prepared and presented in conformity with Indian GAAP. No attempt has been made to reconcile any of the information given in this document to any other principles or to base it on any other standards. Indian GAAP differs in certain significant respects from IFRS, U.S. GAAP and other accounting principles with which prospective investors may be familiar in other countries. If our financial statements were to be prepared in accordance with such other accounting principles, our results of operations, cash flows and financial position may be substantially different. Prospective investors should review the accounting policies applied in the preparation of our financial statements, and consult their own professional advisers for an understanding of the differences between these accounting principles and those with which they may be more familiar.

70. Our business is substantially affected by prevailing economic, political and other prevailing conditions in India.

Our Company is incorporated in India, and the majority of our assets and employees are located in India. As a result, we are highly dependent on prevailing economic conditions in India and our results of operations are significantly affected by factors influencing the Indian economy. Factors that may adversely affect the Indian economy, and hence our results of operations, may include:

- the macroeconomic climate, including any increase in Indian interest rates or inflation;
- any exchange rate fluctuations, the imposition of currency controls and restrictions on the right to convert or repatriate currency or export assets;
- Any scarcity of credit or other financing in India, resulting in an adverse impact on economic conditions in India and scarcity of financing for our expansions;
- Prevailing income conditions among Indian consumers and Indian corporations;
- volatility in, and actual or perceived trends in trading activity on, India's principal stock exchanges;
- changes in India's tax, trade, fiscal or monetary policies;
- political instability, terrorism or military conflict in India or in countries in the region or globally, including in India's various neighboring countries;
- occurrence of natural or man-made disasters;
- prevailing regional or global economic conditions, including in India's principal markets;
- other significant regulatory or economic developments in or affecting India or its ER&D sector;
  international business practices that may conflict with other customs or legal requirements to which we are subject, including anti-bribery and anti-corruption laws;

71. Financial instability, economic developments and volatility in securities markets in other countries may also cause the price of the Equity Shares to decline.

The Indian market and the Indian economy are influenced by economic and market conditions in other countries, particularly emerging Asian market countries. Financial turmoil in Europe and elsewhere in the world in recent years has affected the Indian economy. In recent times, the Indian financial markets had been negatively affected by the volatility in global financial market, including on account of certain European nations' debt troubles and move to break away by the United Kingdom from the European Union. Although, economic conditions are different in each country, investors' reactions to developments in one country can have adverse effects on the securities of companies in other countries, including India. Currencies of a few Asian countries have in the past suffered depreciation against the U.S. Dollar owing to, amongst other, the announcements by the U.S. government that it may

consider reducing its quantitative easing measures. A loss of investor confidence in the financial systems of other emerging markets may cause increased volatility in Indian financial markets and, indirectly, in the Indian economy in general. Any worldwide financial instability could also have a negative impact on the Indian economy. Financial disruptions may occur and could harm our business, future financial performance and the prices of the Equity Shares.

The global credit and equity markets have experienced substantial dislocations, liquidity disruptions and market corrections in recent years. Liquidity and credit concerns and volatility in the global credit and financial markets have increased significantly with the bankruptcy or acquisition of, and government assistance extended to, several major U.S. and European financial institutions. These and other related events, such as the European sovereign debt crisis, have had a significant impact on the global credit and financial markets as a whole, including reduced liquidity, greater volatility, widening of credit spreads and a lack of price transparency in global credit and financial markets. In response to such developments, legislators and financial regulators in the United States and other jurisdictions, including India, have implemented a number of policy measures designed to add stability to the financial markets.

However, the overall impact of these and other legislative and regulatory efforts on the global financial markets is uncertain, and they may not have the intended stabilizing effects. In the event that the current difficult conditions in the global credit markets continue or if there is any significant financial disruption, such conditions could have an adverse effect on our business, future financial performance and the trading price of the Equity Shares.

72. A significant change in the Government of India's economic liberalization and deregulation policies could adversely affect our business and the price of our Equity Shares.

The Government of India has traditionally exercised, and continues to exercise, a dominant influence over many aspects of the economy. Unfavorable government policies including those relating to bio fuels policies, could adversely affect business and economic conditions in India, and could also affect our ability to implement our strategy and our future financial performance. Since 1991, successive governments, including coalition governments, have pursued policies of economic liberalization, including significantly relaxing restrictions on the private sector and encouraging the development of the Indian financial sector. However, the members of the Government of India and the composition of the coalition in power are subject to change. As a result, it is difficult to predict the economic policies that will be pursued by the Government of India. For example, there may be an increasing number of laws and regulations pertaining to the industry we operate. The rate of economic liberalization could change and specific laws and policies affecting our industry, foreign investment, currency exchange and other matters affecting investment in our securities could change as well. Any significant change in India's economic liberalization and deregulation policies could adversely affect business and economic conditions in India generally and our business in particular.

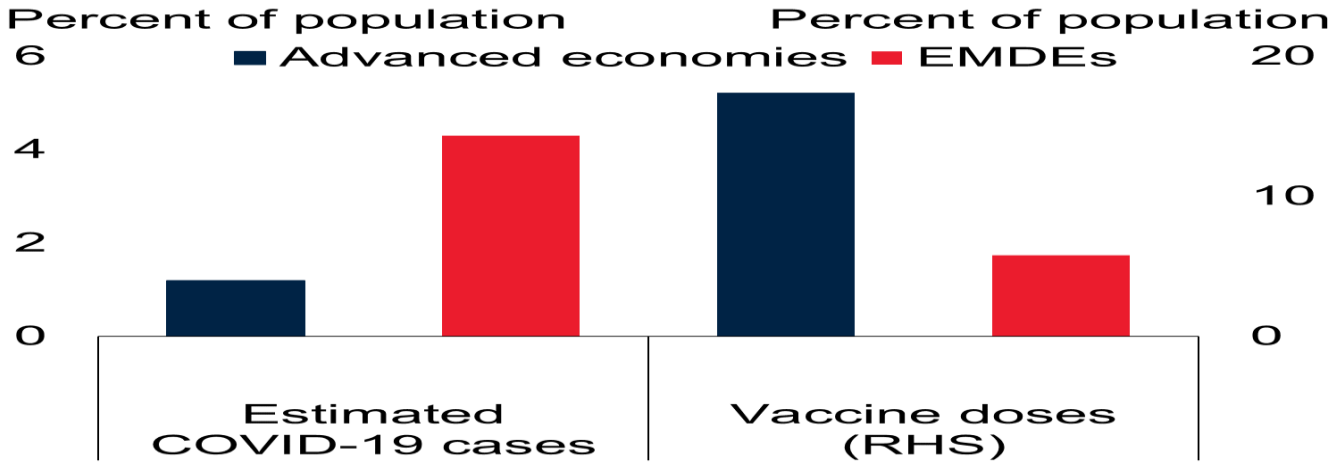
GLOBAL OUTLOOK

The global economy is set to expand 5.6 percent in 2021—its strongest post-recession pace in 80 years. This recovery is uneven and largely reflects sharp rebounds in some major economies—most notably the United States, owing to substantial fiscal support—amid highly unequal vaccine access. In many emerging market and developing economies (EMDEs), elevated COVID-19 caseloads, obstacles to vaccination, and a partial withdrawal of macroeconomic support are offsetting some of the benefits of strengthening external demand and elevated commodity prices. By 2022, global output will remain about 2 percent below pre-pandemic projections, and per capita income losses incurred last year will not be fully unwound in about two-thirds of EMDEs. The global outlook remains subject to significant downside risks, which include the possibility of large COVID-19 waves in the context of new virus variants and financial stress amid high EMDE debt levels. Controlling the pandemic at the global level will require more equitable vaccine distribution, especially for low income countries. The legacies of the pandemic exacerbate the challenges facing policy makers as they balance the need to support the recovery while safeguarding price stability and fiscal sustainability. As the recovery becomes more entrenched, policy makers also need to continue efforts toward promoting growth-enhancing reforms and steering their economies onto a green, resilient, and inclusive development path.

Following a 3.5 percent contraction caused by the COVID-19 pandemic in 2020, global economic activity has gained significant momentum; however, it remains well below pre-pandemic projections. Moreover, the recovery is uneven, passing over many poorer countries, and there is considerable uncertainty about its durability.

The ongoing pandemic continues to shape the path for global economic activity, with severe outbreaks continuing to weigh on growth in many countries. The most recent wave of COVID-19 is now centered in some emerging market and developing economies (EMDEs), where more transmissible and virulent strains are spreading and where vaccine access remains limited. Vaccination remains especially feeble in low-income countries (LICs). In contrast, advanced economies have generally seen substantial vaccination progress, which has helped limit the spread of COVID-19.

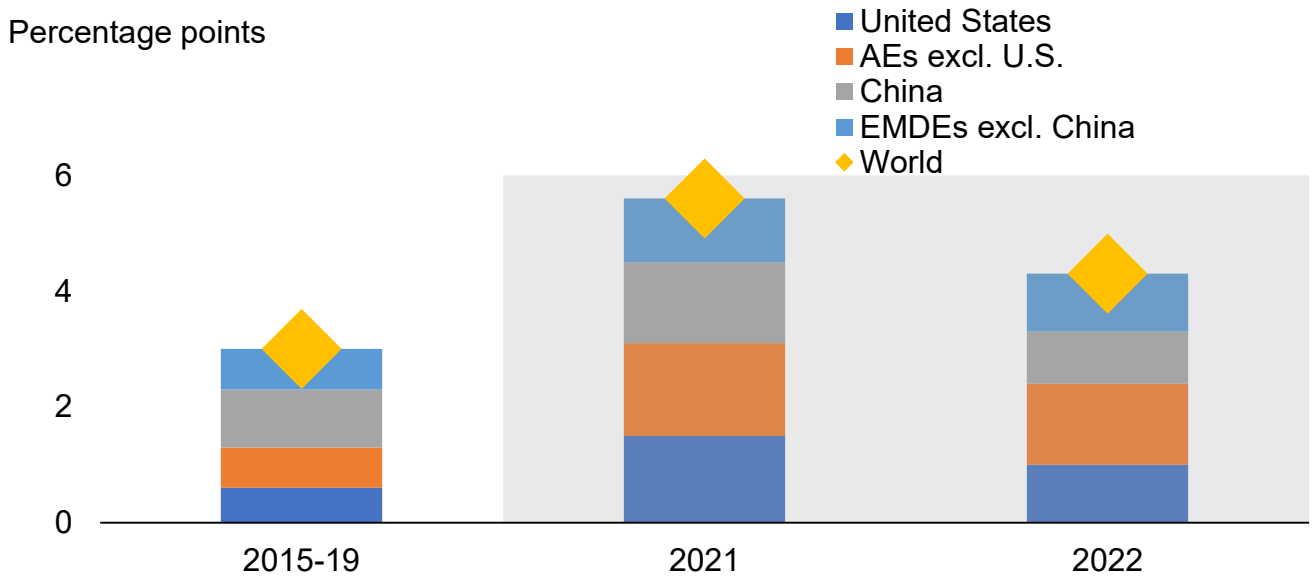


Note: Figure shows the one-month accumulation of COVID-19 cases in AEs and EMDEs over April 17-May 17, 2021, as estimated by the Institute for Health Metrics and Evaluation (IHME), and vaccinations as a share of the population. Sample includes 36 advanced economies and 120 EMDEs.

Amid continued vaccination, economic activity is firming across major advanced economies—most notably in the United States, where the recovery is being powered by substantial fiscal support. Growth in China remains solid but has moderated as authorities have shifted their focus from buttressing activity to reducing financial stability risks. Many other countries, primarily EMDEs, are experiencing subdued pickups alongside surges of COVID-19 cases, even if recent waves of infections appear to be less disruptive to economic activity than previous ones. Recoveries in fragile and conflict-affected LICs are particularly weak, as the pandemic has exacerbated underlying challenges. Whereas global manufacturing activity has firmed, with industrial production surpassing its pre-pandemic level, services activity—especially travel and tourism—remains soft.

Global financial conditions have tightened somewhat, partly reflecting a rise in U.S. bond yields amid increased inflation pressures. Nevertheless, they remain generally supportive, reflecting continued extraordinary policy accommodation by major central banks. Commodity prices have increased markedly, owing to the improving global outlook as well as commodity-specific supply factors. The recovery in global activity and in commodity prices is contributing to an increase in inflation, especially in some EMDEs that have experienced currency depreciation.

Against this backdrop, global output growth is projected to strengthen to 5.6 percent in 2021— its strongest post-recession pace in 80 years. The recovery is underpinned by steady but highly uneven global vaccination and the associated gradual relaxation of pandemic-control measures in many countries, as well as rising confidence. A substantial share of this rebound is due to major economies, with many EMDEs lagging behind. The United States and China are each expected to contribute over one-quarter of global growth in 2021, with the U.S. contribution nearly triple its 2015-19 average. Vaccination progress is a key determinant of near-term forecast revisions. Despite the strong pickup, the level of global GDP in 2021 is expected to be 3.2 percent below pre pandemic projections.



Note: AEs = advanced economies; EMDEs = emerging market and developing economies. Aggregate growth rates are calculated using GDP weights at average 2010-19 prices and market exchange rates. Figure shows contributions to global growth forecast for 2021 and 2022 compared to average contributions to growth in 2015-2019 period. Shaded area indicates forecasts.

The recovery is envisioned to continue into 2022, with global growth moderating to 4.3 percent. Still, by 2022, global GDP is expected to remain 1.8 percent below pre-pandemic projections. Compared to recoveries from previous global recessions, the current cycle is notably uneven, with per capita GDP in many EMDEs remaining below pre-pandemic peaks for an extended period.

In advanced economies, the rebound is expected to accelerate in the second half of 2021 as a broader set of economies pursue widespread vaccination and gradually reopen, with growth forecast to reach 5.4 percent this year—its fastest pace in nearly five decades. Growth is projected to moderate to 4 percent in 2022, partly as fiscal support in the United States begins to recede absent additional legislation.

Aggregate EMDE growth is forecast to reach 6 percent in 2021, as the effects of the pandemic gradually wane and as EMDEs benefit from elevated commodity prices and improving external demand. Nevertheless, the strength of the rebound this year mainly reflects robust pickups in a few large economies. In many other EMDEs, recoveries are expected to be dampened by elevated COVID-19 caseloads and obstacles to vaccine procurement and uptake, as well as by a partial withdrawal of monetary and,

especially, fiscal support. Aggregate EMDE growth is projected to moderate to 4.7 percent next year, owing to the continued unwinding of fiscal support and subdued investment, leaving EMDE output 4.1 percent below pre-pandemic projections in 2022. Among LICs, growth is expected to pick up to an average of 3.8 percent in 2021-22—well below the average pace of 5.1 percent in the 2010-19 period, and leaving the 2022 level of output 4.9 percent below pre pandemic projections.

Notwithstanding these projected recoveries, the pandemic has had a devastating effect on per capita income growth, poverty, and inequality, which will linger for a protracted period. Although per capita income growth in EMDEs is projected to be 4.9 percent this year, it will be essentially zero in LICs. As a result, per capita income catch up with advanced economies could slow or even reverse in many poorer countries. Moreover, per capita income losses incurred in 2020 will not be fully unwound by 2022 in about two-thirds of EMDEs, including 75 percent of fragile and conflict-affected LICs. By the end of this year, it is expected that about 100 million people across EMDEs will have fallen back into extreme poverty. The pandemic's impact on poverty could reverberate for a prolonged period due to its scarring effects on long-term growth prospects. The pandemic has also exacerbated inequality as it has disproportionately affected vulnerable groups—including women, children, and unskilled and informal workers.

Moreover, the global outlook is clouded by uncertainty and subject to various risks. The continued spread of COVID-19 shows that repeated outbreaks are still possible, especially in light of the emergence of new variants that are more virulent, deadly, and resistant to vaccines. Elevated debt levels make the financial system vulnerable to a sudden increase in interest rates, which could stem from a rise in risk aversion, inflation, or expectations of faster monetary tightening. A spike in bankruptcies could damage the banking system, restrict the flow of credit, and trigger credit crunches.

The near- and longer-term consequences of the COVID-19 crisis pose enormous policy challenges. The immediate priority continues to be pandemic control, including overcoming obstacles in procuring and distributing vaccines. International cooperation is needed to help ensure timely and equitable vaccine distribution—particularly in LICs, where inoculation continues to be very slow. As the pandemic is brought under control, policy actions will also be needed to address its adverse legacies, which will require balancing competing priorities.

In many economies, central banks will need to carefully weigh the continued weakness of domestic demand against near-term inflation pressures. Model-based forecasts and inflation expectations point to an increase in inflation in 2021 that will exceed target ranges in about one half of inflation-targeting EMDEs. Although this may not warrant an aggressive policy response, additional inflation pressure across EMDEs may risk de-anchoring inflation expectations and could trigger monetary tightening despite subdued recoveries, which in some cases could also result in financial stress.

Similarly, many EMDEs will need to be careful to avoid a premature withdrawal of fiscal support, while still keeping a steady eye on medium-term debt sustainability. Given the historic increase in sovereign debt, it will be essential to improve the efficiency of public spending. Strengthening domestic revenue mobilization and medium-term fiscal frameworks can help widen fiscal space and bolster policy credibility. Global cooperation, including private sector participation, is needed to provide debt relief to the world's poorest countries and fund the investments needed to boost growth and lower greenhouse gas emissions.

Notwithstanding the expected near-term recovery, EMDE output is likely to remain below its prepandemic trend for a prolonged period, as many fundamental drivers of growth have been scarred by the pandemic. A comprehensive set of policies will be required to promote a strong recovery that mitigates inequality and enhances environmental sustainability, ultimately putting economies on a path of green, resilient, and inclusive development (GRID). For example, labor market reforms and improved social safety nets can bolster labor productivity by facilitating the movement of labor toward high-growth sectors while protecting vulnerable groups. Productivity can also be boosted by efforts to increase access to digital connectivity and reduce trade costs, which are particularly elevated in EMDEs. Increasing investments in learning infrastructure and education will also be required to boost human capital and arrest recent declines in associated budgets, while expanding green investment can enhance climate resilience.

Government Initiatives

The first Union Budget of the third decade of 21st century was presented by Minister for Finance & Corporate Affairs, Ms. Nirmala Sitharaman in the Parliament on February 1, 2020. The budget aimed at energising the Indian economy through a combination of short-term, medium-term and long-term measures.

In the Union Budget 2021-22, capital expenditure for FY22 is likely to increase to increase by 34.5% at Rs. 5.5 lakh crore (US$ 75.81 billion) over FY21 (BE) to boost the economy.

Increased government expenditure is expected to attract private investments, with production-linked incentive scheme providing excellent opportunities. Consistently proactive, graded and measured policy support is anticipated to boost the Indian economy. In March 2021, the Ministry of Electronics and IT (MeitY) invited applications for the second round of large-scale electronics manufacturing under the production-linked incentive (PLI) scheme. The window to apply for the scheme has been opened until March 31, 2021, which could be further extended in accordance with guidelines issued by the MeitY.

In March 2021, following the announcement of incentive schemes for mobile and IT hardware manufacturing, the government announced to consider a key scheme for establishing display fabrication units in India. The Ministry of Electronics and Information Technology (MeitY) has requested expressions of interest (EoIs) from organisations interested in establishing LCD/OLED/AMOLED/QLED-based display fabrication units in India.

In November 2020, the Government of India announced Rs. 2.65 lakh crore (US$ 36 billion) stimulus package to generate job opportunities and provide liquidity support to various sectors such as tourism, aviation, construction and housing. Also, India's cabinet approved the production-linked incentives (PLI) scheme to provide ~Rs. 2 trillion (US$ 27 billion) over five years to create jobs and boost production in the country.

Numerous foreign companies are setting up their facilities in India on account of various Government initiatives like Make in India and Digital India. Mr. Narendra Modi, Prime Minister of India, launched Make in India initiative with an aim to boost country's manufacturing sector and increase purchasing power of an average Indian consumer, which would further drive demand and spur development, thus benefiting investors. The Government of India, under its Make in India initiative, is trying to boost the contribution made by the manufacturing sector with an aim to take it to 25% of the GDP from the current 17%. Besides, the Government has also come up with Digital India initiative, which focuses on three core components: creation of digital infrastructure, delivering services digitally and to increase the digital literacy.

Some of the recent initiatives and developments undertaken by the Government are listed below:

- In March 2021, Flipkart announced plans to expand its grocery services to >70 cities in the next six months. As per Economic Survey 2020-21, India's real GDP growth for FY22 is projected at 11%. The January 2021 WEO update forecast a 11.5% increase in FY22 and a 6.8% rise in FY23. According to the IMF, in the next two years, India is also expected to emerge as the fastest-growing economy.

India is focusing on renewable sources to generate energy. It is planning to achieve 40% of its energy from non-fossil sources by 2030, which is currently 30% and have plans to increase its renewable energy capacity from to 175 gigawatt (GW) by 2022.

India is expected to be the third largest consumer economy as its consumption may triple to US$ 4 trillion by 2025, owing to shift in consumer behaviour and expenditure pattern, according to a Boston Consulting Group (BCG) report. It is estimated to surpass USA to become the second largest economy in terms of purchasing power parity (PPP) by 2040 as per a report by PricewaterhouseCoopers.

INDIAN RENEWABLE ENERGY INDUSTRY

Introduction

Indian renewable energy sector is the fourth most attractive renewable energy market in the world. India was ranked fifth in wind power, fifth in solar power and fourth in renewable power installed capacity, as of 2019.

Installed renewable power generation capacity has gained pace over the past few years, posting a CAGR of 17.33% between FY16-20. With the increased support of Government and improved economics, the sector has become attractive from investors

perspective. As India looks to meet its energy demand on its own, which is expected to reach 15,820 TWh by 2040, renewable energy is set to play an important role. The government is aiming to achieve 227 GW of renewable energy capacity (including 114 GW of solar capacity addition and 67 GW of wind power capacity) by 2022, more than its 175 GW target as per the Paris Agreement. The government plans to establish renewable energy capacity of 523 GW (including 73 GW from Hydro) by 2030.

Market Size

As of February 2021, installed renewable energy capacity stood at 94.43 GW. By December 2019, 15,100 megawatts (MW) of wind power projects were issued, of which, projects of 12,162.50 MW capacity have already been awarded. Power generation from renewable energy sources in India reached 127.01 billion units (BU) in FY20.

Road Ahead

The Government is committed to increased use of clean energy sources and is already undertaking various large-scale sustainable power projects and promoting green energy heavily. In addition, renewable energy has the potential to create many employment opportunities at all levels, especially in rural areas. The Ministry of New and Renewable Energy (MNRE) has set an ambitious target to set up renewable energy capacities to the tune of 227 GW by 2022, of which about 114 GW is planned for solar, 67 GW for wind and other for hydro and bio among other. India's renewable energy sector is expected to attract investment worth US$ 80 billion in the next four years. About 5,000 Compressed Biogas plants will be set up across India by 2023.

It is expected that by 2040, around 49% of the total electricity will be generated by renewable energy as more efficient batteries will be used to store electricity, which will further cut the solar energy cost by 66% as compared to the current cost.Use of renewables in place of coal will save India Rs. 54,000 crore (US$ 8.43 billion) annually. Renewable energy will account for 55% of the total installed power capacity by 2030.

As per the Central Electricity Authority (CEA) estimates, by 2029-30, the share of renewable energy generation would increase from 18% to 44%, while that of thermal is expected to reduce from 78% to 52%.

According to the year-end review (2020) by the Ministry of New and Renewable Energy, another 49.59 GW of renewable energy capacity is under installation and an additional 27.41 GW of capacity has been tendered. This puts the total capacity of renewable energy projects (already commissioned or in the pipeline) at ~167 GW.

The Government of India wants to develop a 'green city' in every state of the country, powered by renewable energy. The 'green city' will mainstream environment-friendly power through solar rooftop systems on all its houses, solar parks on the city's outskirts, waste to energy plants and electric mobility-enabled public transport systems.

BIO-FUEL INDUSTRY IN INDIA

India is one of the fastest growing economies and the third largest consumer of primary energy in the world after the US and China. The BP Energy Outlook 2019 projects India's share of total global primary energy demand to roughly double to ~11% by 2040, underpinned by strong population growth and economic development:

- India accounts for more than a quarter of net global primary energy demand growth between 2017-2040.
- 42% of this new energy demand is met through coal, meaning CO2 emissions roughly double by 2040.
- Gas production grows but fails to keep pace with demand, implying a significant growth in gas imports.

While fossil fuels may continue to play a dominant role in the energy scenario of India over the next few decades, conventional fossil fuel resources are limited, non-renewable, polluting and need to be used prudently. Fluctuations in crude oil prices severely strain the Indian economy, particularly its current account deficit due to its major dependency on imported crude. India's fuel energy security will remain vulnerable until alternative fuels are developed based on renewable feedstock's.

The government of India has emphasized improving energy security by, among other measures, reducing import dependence, with a target of decreasing fossil fuels use by 10% from current levels by the year 2022; it also targets reducing the country's carbon footprint by 30-35% by the year 2030. These targets will be achieved through a five pronged strategy which includes: Increasing domestic production, adopting biofuels and renewables, implementing energy efficiency norms, improving refinery processes and achieving demand substitution. This strategy envisages a strategic role for biofuels in the Indian energy basket. The growing concern about import dependence for fuel supplies in tandem with environmental pollution issues are driving the development of alternative fuels that have superior environment benefits and can be economically competitive with fossil fuels.

India is endowed with abundant indigenous, non-polluting and virtually inexhaustible renewable energy resources. The government of India has proposed a target of 20% blending of ethanol in petrol and 5% blending of biodiesel in diesel by 2030.

The following alternative fuels and technologies need special attention to make India's energy system sustainable:

- Biofuels: Ethanol, HVO (Hydro treated vegetable oils) and Bio CNG (Bio Compressed Natural gas) etc.
- Hydrogen as fuel of the future and hydrogen-powered fuel cell vehicles • Chemical energy sources (fuel cells)
- Battery operated electric vehicles
- Solar and wind energies
- Municipal solid waste (MSW) to drop-in fuels
- Methanol from domestic coal

Biofuels are an appealing alternate energy options because they are renewable and have the potential to lower carbon emissions and environmental impacts while also cutting import dependence. Considering these prospective benefits, India began piloting a 5% ethanol blending (E5) program in 2001 and in 2003 formulated the National Mission on Biodiesel to achieve 20% biodiesel blends by 2011–2012 (Government of India, 2002, 2003). In 2009, a National Policy on Biofuels was developed by the Ministry of New and Renewable Energy that proposed a non-mandatory target of 20% blending for both biodiesel and ethanol by 2017, and outlined a broad strategy for the biofuels program and policy measures to be considered to support the program. Similar to many countries around the world, however, India's biofuel programs have experienced setbacks, primarily because of supply shortages and global concerns over food security. In addition, Oil Marketing Companies (OMCs) in India have not yet been able to accept offers to tenders for required quantities of ethanol due to a variety of constraints including state specific and supplier related issues as well as ethanol pricing issues.

The Indian approach to producing biofuels is based solely on using non-food feedstock's obtained from degraded lands or wastelands not suitable for agriculture, thus avoiding a possible conflict of fuel vs. food security. The government has enhanced the ethanol procurement price and encouraged non-conventional production from cellulosic and lignocellulose materials as well as via the historical petrochemical route.

The government plans to increase ethanol blending in gasoline from 4.3% (2020) to 8-10% by (2021). For 10% ethanol blending, India will require about 4.5 billion liters of ethanol per year, which represents about Rs 23,000 crore (US$ 3 billion) in terms of value. In order to augment feedstock availability and promote biofuels, the government announced a new National Policy on Biofuels 2018 on 8th June 2018. This policy encourages innovation in biofuels production technologies, providing thrust to research and development (R&D) and demonstration activities that utilize developed/emerging technologies. The policy focuses on the development of next generation biofuel conversion technologies based on new feedstocks and promotes wider exploration of domestically available feedstock given the Country's tremendous biodiversity. The policy aims to provide financial and fiscal incentives specific to biofuel type, categorized as first generation (1G), second generation (2G) and third generation (3G) fuels. The first generation category of biofuels includes conventional ethanol and biodiesel. The second generation comprises ethanol from lignocellulose biomass, non-food crops, industrial wastes and residues streams as well as drop-in fuels from biomass, MSW, plastics and industrial wastes. The third generation includes compressed Bio CNG from food wastes, biomass, MSW, sewage water, etc.

The new policy adds many newly permissible raw materials for 1G ethanol production including sugarcane juice, sugar containing materials like sugar beet, starch containing materials like corn, cassava as well as damaged food grains like wheat, broken rice and rotten potatoes which are expected to increase the availability of 1G ethanol. However, even these additional raw materials for 1G ethanol will not be able to substantially improve the supply of ethanol to be able to enable E10 gasoline on pan India basis. Therefore, production of ethanol from 2G technologies will also be essential to meet the OMC's demand for ethanol for fuel blending. Biomass is abundantly available in India, therefore research in the area of conversion of biomass to various biofuels such as ethanol, methanol, Bio CNG is considered essential to India's energy security. Moreover, technologies to convert abundantly available MSW, industrial plastic waste, flue gases, etc., to valuable energy carriers will be highly beneficial to India.

With a thrust on advanced biofuels, the policy provides a viability gap funding scheme for 2G ethanol bio-refineries of Rs 1950 crore (US $260 million) over 6 years in addition to additional tax incentives and higher purchase prices as compared to 1G biofuels. The policy also encourages setting up supply chains for biodiesel production from non-edible oilseeds, used cooking oils and short gestation crops. Oil marketing companies will offer 100% offtake guarantees to biofuel manufacturers. These measures are expected to enable the industry to reach Rs 100,000 crore (US $13.5 billion) total turnover by 2030.

The National Policy on Biofuels, 2018

The National Policy on Biofuels 2018 specifically promotes advanced biofuels to achieve a target of 20% blending of biofuels with fossil-based fuels by 2030. Life cycle analyses (LCA) are carried out for all technologies and also are part of environment clearance for advanced biofuels commercial and demonstration projects to determine the CO2 emissions reductions provided by different technology pathways.

In India, there are two operational advanced biofuel facilities - one pilot and one demonstration plant - with a combined production capacity of 1.75 million litres per year of cellulosic ethanol. There are several other advanced biofuels plants in development. Indian Glycols built the first plant in the country in 2016 at their Kashipur site in Uttarakhand. Their cellulosic ethanol pilot plant uses technology developed by the Center for Energy Biosciences at the Mumbai Institute of Chemical Technology (DBT-ICT). It has a 750,000 liter (0.75 million litres) annual production capacity. Praj Biofuels built the country's second facility in 2017, an integrated cellulosic ethanol biorefinery, which once in full operation will produce 1 million liters of ethanol per year from agricultural residues such as rice straw, wheat straw, cotton stalk and bagasse. In 2018, Shell Bangalore completed a demonstration plant which will use an innovative waste-to-fuels technology and is expected to produce 50 million liters per year. In 2018, Chempolis, Fortum and Numaligarh Refinery also announced forming a joint venture to build a biorefinery in Assam that will convert bamboo into ethanol, furfural, acetic acid and biocoal (Biofuture platform, 2018).

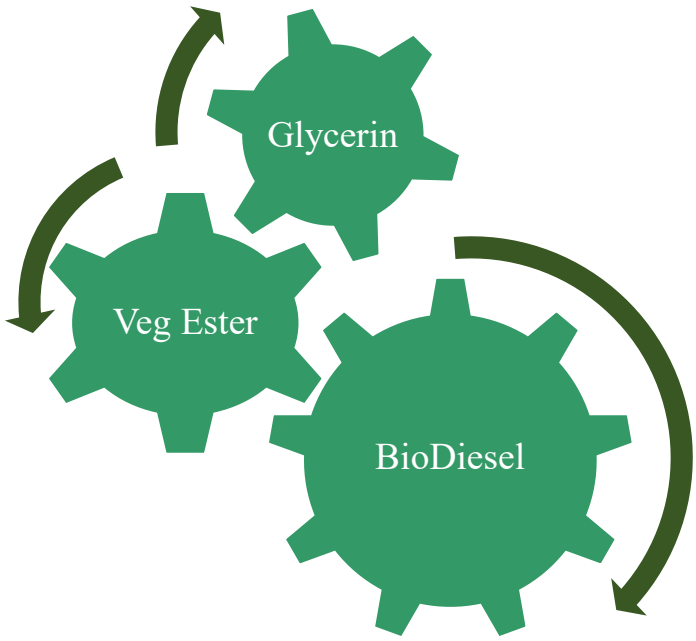
OUR PRODUCTS



PRODUCTS DESCRIPTION

1. BioDiesel

Biodiesel is a renewable, biodegradable fuel manufactured domestically from vegetable oils, animal fats, or recycled restaurant grease and methanol. Biodiesel meets both the biomass-based diesel and overall advanced biofuel requirement of the Renewable Fuel Standard. Biodiesel is a liquid fuel often referred to as B100 or neat biodiesel in its pure, unblended form. Like petroleum diesel, biodiesel is used to fuel compression-ignition engines.

Biodiesel is a clean-burning fuel and safe alternative to replace traditional petroleum diesel. It has high-lubricity and can be a fuel component for use in existing, unmodified diesel engines. This means that no retrofits are necessary when using biodiesel fuel in any diesel-powered combustion engine. It is the only alternative fuel that offers such convenience. Biodiesel acts like petroleum diesel, but produces less air pollution, comes from renewable sources, is biodegradable and is safer for the environment. Producing biodiesel fuels can help create local economic revitalization and local environmental benefits. Many groups interested in promoting the use of biodiesel already exist at the local, state and national level.

BioDiesel Utilization:

- On-Road Vehicles: All Vehicles having Diesel Engine can be powered by Biodiesel without any hassle.
- Off-Road Vehicles: Natural Biodiesel fuel can be used for construction, mining, and farm machinery.
- Marine Vessels: Natural Biodiesel can be used in marine engines safely. Marine use is especially attractive due to the elimination of any possibility for contamination of waterways.
- Stationary Power Generation: With new power generation capacity coming online, Natural biodiesel makes an attractive choice to meet the regulations. Many stationary applications are permitted sources requiring exhaust emission control system, which will work well with biodiesel but will not work with diesel fuel.
- Boiler: With natural gas prices rising high, biodiesel can be substituted easily for natural gas with minor changes necessary to the burner train.
- Hybrid Vehicles: With many states now mandating hybrid electric vehicles (including the fuel cell hybrid), biodiesel will make excellent reforming fuel.
- Lubricity Agent /Additive: Natural biodiesel can also be used as a lubricity agent/enhancer in many applications. It is especially useful in marine applications where water contamination with petroleum lubricity agents can create problems. With the low-sulfur fuel regulation of future, biodiesel can be used as a lubricity additive. A 1-2% biodiesel added to diesel fuel can increase diesel lubricity by 65%.
- Fuel Additive: Biodiesel can also be used as a diesel fuel additive for the purpose of keeping the injectors, pumps and other combustion components clean. A 1-2% blend should be sufficient for this purpose.

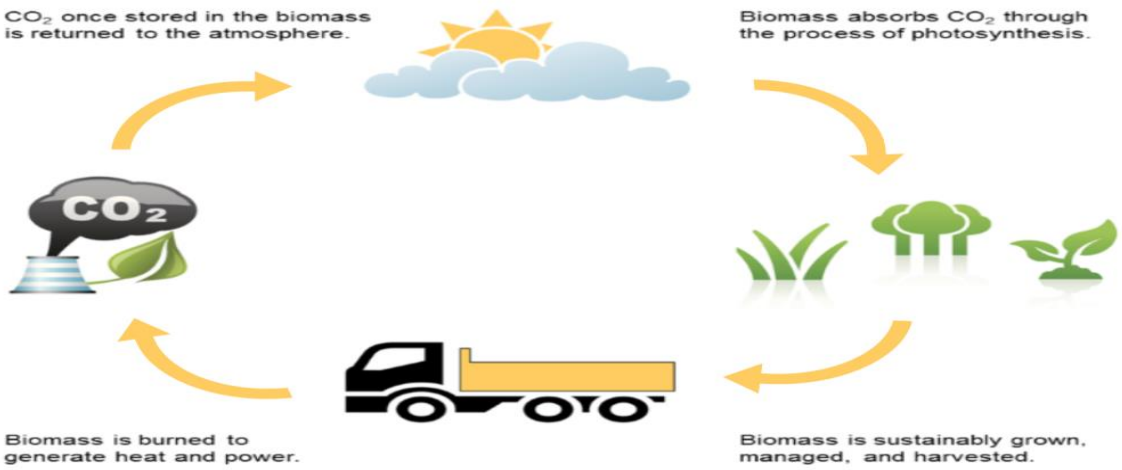
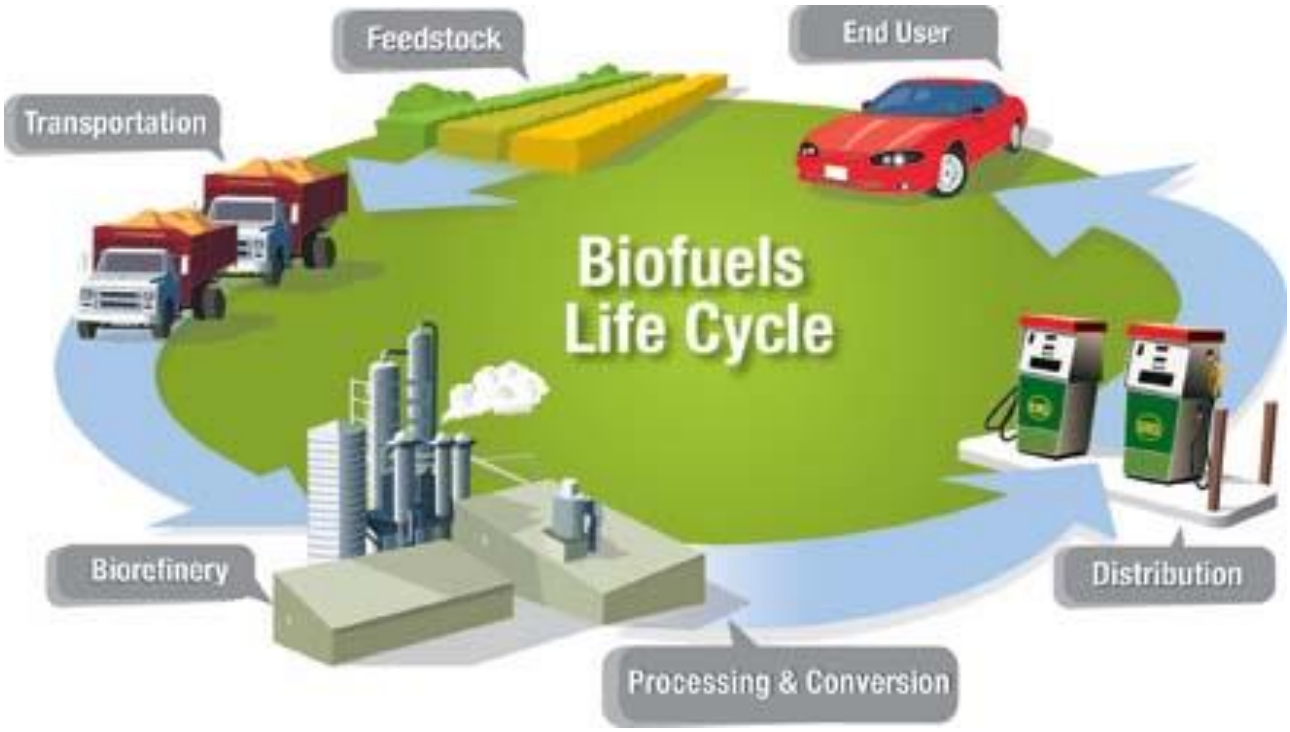
Biodiesel Life Cycle





2. Veg Ester-Semi Finished

It is a semi-finished Biodiesel and with some further processing converted in to Biodiesel. This can be sold to other processing units for generation of Biodiesel.

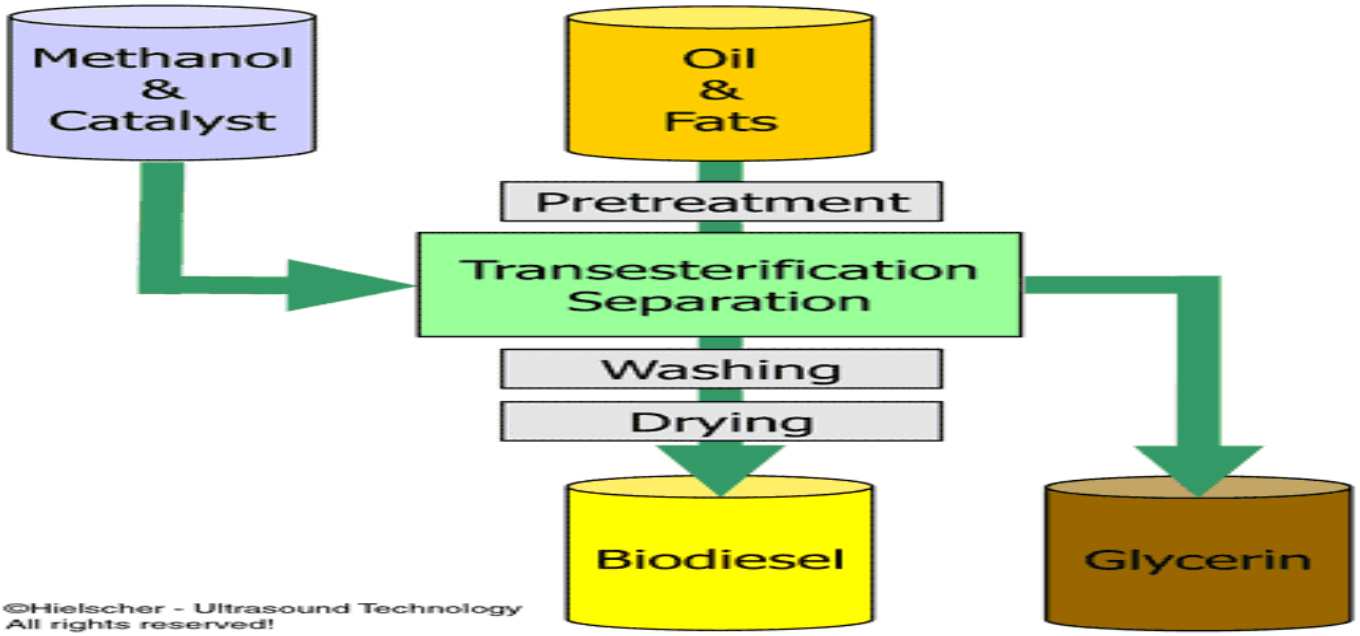
3. Glycerin

Glycerol (also known as glycerin) is a major by product in the biodiesel manufacturing process. In general, for every 100 pounds of biodiesel produced, approximately 10 pounds of crude glycerol are created. As the biodiesel industry is rapidly expanding, a glut of crude glycerol is being created.

There are various outlets for disposal and utilization of the crude glycerol generated in biodiesel plants. For large scale biodiesel producers, crude glycerol can be refined into a pure form and then be used in food, pharmaceutical, or cosmetics industries. For

small scale producers, however, purification is too expensive to be performed in their manufacturing sites. Their crude glycerol is usually sold to large refineries for upgrading.

PROCESS FLOW



PROCESS DESCRIPTION

1) **Procurement of Feed Stocks:** The production of Biodiesel requires three principal feed stocks;

   - **Oil:** Oils & Fats that are used currently for biodiesel production are different vegetable oil and its derivatives such as Palm sterein/Palm – other fatty acids, Animal tallows oil and waste vegetable oil (which is often used as soybean oil).

   - **Alcohol:** Although a variety of alcohols can be used to produce Biodiesel, such as, ethanol, methanol, isopropyl or butanol, we will focus on methanol as it is most readily available, and most frequently used (the reaction is also more complicated with larger alcohols, because of formation of chemical water in the process). Therefore the Biodiesel produced is referred to as methyl esters. Methanol is one of the most common industrial alcohols; because of its abundant supply it's most often the least expensive alcohol as well and its dehydrating qualities. We often use a Co-Solvent process for stubborn feed oils.

   - **Catalyst:** The third reactant needed is a catalyst that initiates the reaction and allows the esters to detach. The strong base solutions typically usedare sodium hydroxide (NaOH) and potassium hydroxide (KOH).

2) **Feedstock Pretreatment:**

   Common feedstock used in biodiesel production include yellow grease (recycled vegetable oil), "virgin" vegetable oil, and tallow. Recycled oil is processed to remove impurities from cooking, storage, and handling, such as dirt, charred food, and water. Virgin oils are refined, but not to a food-grade level. Degumming to remove phospholipids and other plant matter is common, though refinement processes vary. Water is removed because its presence during base-catalyzed transesterification results in the saponification (hydrolysis) of the triglycerides, producing soap instead of biodiesel.

   A sample of the cleaned feedstock is then tested via titration against a standardized base solution, to determine the concentration of free fatty acids present in the vegetable oil sample. The acids are then either removed (typically through neutralization), or are esterified to produce biodiesel or glycerides.

3) **Transesterification & Separation:**

   The transesterification process is a reversible reaction and carried out by mixing the reactants – fatty acids, alcohol and catalyst. A strong base or a strong acid can be used as a catalyst. At the industrial scale, mostly sodium or potassium methanolate is

used. The end products of the transesterification process are raw biodiesel and raw glycerol. In a further process these raw products undergo a cleaning step. In case of using methanol as alcohol FAME (fatty acid methyl ester) biodiesel is produced. At this step by product glycerol gets separated from the raw biodiesel.

4) Washing:

Purification of crude biodiesel is mandatory for the fuel to meet the strict international standard specifications for biodiesel. Biodiesel is conventionally purified using water and dry washing technologies. Water could eliminate the remaining sodium salts and soaps formation; this is due to their water solubility. Although water washing is efficient, it is associated with problems such as increase in production time and cost of production, and difficulty in removing biodiesel from water.

5) Drying:

Dry washing is another most regularly used technology in the dynamics of biodiesel purification process. The dry washing procedure is waterless, improves fuel quality, is simple to incorporate into existing plant, reduces washing time and zero waste-water, minimizes total surface area coverage of wash tank, and saves space. It was found by that dry washing procedure for the refining of crude biodiesel decreases cost of production and lowers production time.

Management believes the estimates used in the preparation of the financial information are prudent and reasonable. Future results may vary from these estimates.

2.2. Summary of significant accounting policies

a) Property, Plant and Equipment:

Property, plant and equipment are stated at their cost of acquisition less accumulated depreciation. The cost of acquisition includes freight, installation cost, duties, taxes and other incidental expenses, identifiable with the asset, incurred during the installation / construction stage in order to bring the assets to their working condition for intended use, including borrowing costs capitalized, if any, but are net of Input Tax Credits availed for the relevant element in the Cost. Property, plant and equipment include Lease hold Land, which is amortized equally over the tenure of Lease. The value of Lease hold Land includes cost of premium and other expenses incurred in order to meet the condition of lease agreement and get the Land on Lease.

b) Depreciation and Amortisation:

Depreciation on assets is provided on the Written Down Value (WDV) Method over the estimated useful life of the assets according to the classification and as per useful life specified in Schedule II to the Companies Act, 2013 except in following cases, useful life has been taken based on the nature of assets and its estimated usage. Lease hold Land is amortized over a tenure of Lease on straight line basis.

Sr. No.	Nature of Asset	Asset Class	Useful Life (Years)
1	Storage Room	Buildings	25
2	Pressure Pumps	Plant & Machineries	8
3	Fire Extinguisher	Office Equipment	15
4	CCTV Camera	Office Equipment	6

On the additions / disposal during the year, depreciation is provided pro-rata on the basis of number of days for which the asset was used during the year.

Intangible assets in form of Trademarks are amortized over a period of 5 Years on straight line basis.

c) Inventories:

Inventories of raw material and finished goods are valued at lower of the cost or net realizable value. Obsolete, defective and unserviceable Inventory, if any, are duly provided for.

d) Revenue Recognition:

Revenue from sale of products are recognized when the risk and rewards of ownership of products are passed on to the customers. Revenue is recorded exclusive of GST and net of trade and quantity discounts or rebates granted.

Income from Services rendered are booked based on agreements/ arrangements with the concerned parties.

Interest is recognized on a time proportion basis taking into account the amount outstanding and the rate applicable. Dividend income is recognized if the right to receive payment is established by the Balance Sheet date.

e) Employee Benefits:

Employee Benefits comprise short term as well as long term defined benefit as well as defined contribution plans. All employee benefits payable wholly within twelve months of rendering the service are classified as short-term employee benefits. The undiscounted amount of short-term employee benefits expected to be paid in exchange for the services rendered by employees is recognized during the period. Company has no such provisions and expenses relating to employee benefits such as provident fund contributions and employee state insurance, retirement benefits or leave encashment or any other amounts of such nature. The company is not liable to deduct Professional tax as per the law prevailing in the State of Rajasthan. The company has not valued its obligations related to Gratuity.

f) Goods and Service Tax:

Goods and service tax is accounted for in the books of accounts in accordance with the provisions of the goods and service tax law for the time being in force, and the liability or the credits are accordingly disclosed in the financial information.

g) Borrowing Costs:

Borrowing costs that are directly attributable to the acquisition of qualifying assets are to be capitalized for the period until the asset is ready for its intended use. A qualifying asset being, an asset that necessarily takes a substantial period of time to get ready for its intended use. Other borrowing costs are to be recognized as an expense in the period in which they are incurred.

h) Accounting for Taxes on Income:

(a) Income tax expense comprises current tax (i.e. amount of tax for the period determined in accordance with the Income Tax Act, 1961) and deferred tax charge or credit (reflecting the tax effects of timing differences between accounting income and taxable income for the period).

(b) The deferred tax charge or credit and the corresponding deferred tax liabilities or assets are recognized using the rates and laws that have been enacted or substantively enacted at the balance sheet date. Deferred tax assets are recognized only to the extent there is reasonable certainty the assets can be realized in future; however, where there is unabsorbed depreciation and carry forward loss under taxation laws, deferred tax assets are recognized only if there is a virtual certainty of realization of such assets. Deferred tax assets are reviewed at each balance sheet date and written down or written up to reflect the amount that is reasonably /virtually certain (as the case may be) to be realized.

i) Leases:

Lease, where the lessor effectively retains substantially all the risks and benefits of ownership of the leased asset during the lease term, are classified as operating leases. Lease payments under operating lease are recognized as an expense in the profit and loss account on a straight-line basis over the lease term, considering the renewal terms, if appropriate.

j) Impairment of Assets:

The Company assesses at each balance sheet date whether there is any indication that an asset may be impaired. If any such indication exists, the Company estimates the recoverable amount of the asset. The recoverable amount is the greater of the net selling price and value in use. In assessing value in use, the estimated future cash flows are discounted to their present value based on an appropriate discount factor. If such recoverable amount of the asset or the recoverable amount of the cash generating unit to which the asset belongs is less than its carrying amount, the carrying amount is reduced to its recoverable amount. The reduction is treated as an impairment loss and is recognized in the profit and loss account. If at the balance sheet date there is an indication that a previously assessed impairment loss no longer exists, the recoverable amount is reassessed and the asset is reflected at the recoverable amount subject to a maximum of depreciable historical cost.

k) Cash and Cash Equivalents:

Cash and Cash Equivalents comprises Cash-in-Hand, Short term Deposits and Balance in Current Accounts with Banks. Cash equivalents are short –term balances (with an original maturity of three months or less from the date of acquisition), highly liquid investments that are readily convertible into known amounts of cash and which are subject to insignificant risk of changes in value.

l) Earnings Per Share (EPS) :

Basic EPS is computed using the weighted average number of equity shares outstanding during the period. Diluted EPS is computed using the weighted average number of equity and dilutive equity equivalent shares outstanding during the year-end, except where the results would be anti-dilutive.

m) Contingencies / Provisions :

The Company creates a provision when there is present obligation as a result of a past event that probably requires an outflow of resources and a reliable estimate can be made of the amount of the obligation. A disclosure for a contingent liability is made when there is a possible obligation or a present obligation that may, but probably will not, require an outflow of resources. When there is a possible obligation or a present obligation in respect of which the likelihood of outflow of resources is remote, no provision or disclosure is made. Loss contingencies arising from claims, litigation, assessment, fines, penalties, etc. are recorded when it is probable that a liability has been incurred and the amount can be reasonable ascertained.

n) The company has entered into a lease agreement in 2017. The original lease being effective from 01.01.1998 for 99 years. The original agreement was between Rajasthan state industrial development and Investment Corporation limited and Jagdish Petrochemical. Note No		Particular	Ratio	Numerator	Denominator	July 31, 2021	March 31, 2021	March 31, 2020	March 31, 2019	Reason for Movements
34	RESTATED STATEMENT OF ACCOUNTING RATIOS (I)									
	(a)	Current Ratio	Current assets / Current liabilities	**Current assets:-** inventories + trade receivables + cash & cash Equipments + short term loans & advances + other current assets	**Current liabilities:-** short term borrowings + trade payables + other current liabilities + short term provisions	3.05	2.60	2.02	0.84	Current Ratio has improved over a period of time mainly because of increase in GST credit (which is grouped under other current assets) as company is having inverted credit structure where raw material is taxed at 18% against which finished goods are taxed at 12% under GST Law.

	(b)	Debt-Equity Ratio	Debt / Equity	**Debt:-** long term borrowings + short term borrowings	**Equity:-** equity attributable to equity holders	1.05	4.30	6.31	1.68	Debt Equity Ratio has increased as at March 31, 2020 as compare to March 31, 2019 Since from that year company has started its Manufacturing activities with borrowed fund from Bank and Directors. Subsequent reduction in the ratio pertains to re-payment of borrowings and issue of new equity shares.
	(c)	Debt Service Coverage Ratio	Earning available for debt services / Interest + Principal	**Earnings available for debt services :-** Earning before interest (attributable to long-term borrowing) and tax	**Interest + Principal :-** interest expenses on borrowings and principal amount of borrowings due during the current year.	2.63	2.27	3.28	0.00	Debt Service Coverage Ratio has increased as at March 31, 2020 as compare to March 31, 2019 Since from that year company has started its Manufacturing activities with borrowed fund from Bank and Directors. Subsequent movement in the ratio pertains to increase in EBIT and re-payment of borrowings.
	(d)	Return on Equity Ratio	Net Profit after taxes - Preference Dividend (if any) / Average Equity shareholders' fund	**Net Profit after taxes - Preference Dividend (if any) :-** Profit/(Loss) for the year attributable to equity holders of the parent	**Equity shareholders' fund:-** equity attributable to equity holders of the parent. Average Equity shareholders' fund = (Opening equity shareholders' fund + closing equity shareholders' fund) / 2	9.29 %	39.23 %	25.60 %	42.00 %	Initial movement in Return on Equity Ratio from FY 2018-19 to 2019-20 and from 2019-20 to FY 2020-21 is mainly due to movement in Revenue from operations. Subsequent decline in Ratio during period ended July 31, 2021 is mainly due to issue of new shares.
	(e)	Inventory turnover ratio (in times)	Cost of goods sold / Closing Inventory	**Cost of goods sold :-** purchases + manufacturing expenses + changes in inventories of stock-in-trade	**Closing Inventory :** Inventory at the end of the year	5.51	8.62	3.24	74.80	During 2018-19, Company was not engaged in manufacturing. With regard to Raw Material for manufacturing as per market trend company has to purchase inventory against 100% advances and hence RM and finished Goods kept at low level.

	(f)	Trade Receivables turnover ratio (in times	Revenue from operations / Trade Receivables	Revenue from operations	**Closing trade receivables :** Receivables at the end of the year	11.43	1.47	78.68	7.90	In the initial years of production i.e. 2019-20, company has sold goods by giving higher credit period which later on reduced and hence this ratio has improved in 2020-21. In July 2021, again ratio has increased to some extent as considering market trend, company allowed more days of credit to its customers as compared to 2020-21.
	(g)	Trade payables turnover ratio (in times)	Purchase / Trade payables	**Purchase :-** Purchases	**Closing Trade payables :** Payables at the end of the year	0.04	1.03	41.31	35.77	Initial movement in ratio was mainly due to shifting of operations from trading activities to manufacturing activities. However, post that Company started procuring raw material by paying in advance so as to take benefit of price discount which results into reduction in ratio at minimal level.
	(h)	Net capital turnover ratio (in times)	Revenue from operations / Capital employed	Revenue from operations	**Capital employed:** - total equity + long term borrowing (including current maturity). Capital employed is worked out based on average i.e. (opening capital employed + closing capital employed) / 2	2.06	5.02	3.05	13.57	The major decline in ratio from FY 2018-19 to FY 2019-20 was due to reduction in revenue from operations as well as raising finance from banks, financial institutions and directors. However, subsequent improvement in the ratio was mainly due to increase in sales as well as repayment of borrowing.
	(i)	Net profit ratio	Net profit after tax / Revenue from operations	Net profit after tax	Revenue from operations	1.84 %	1.60 %	1.89 %	1.54 %	Net Profit Ratio depends on the Crude price. The variation in the same is due to change in Raw Material price and price of Finished Product in the open Market which governs the selling as well as buying rates.

	(j)	Return on Capital employed	Earning before interest & taxes (EBIT) Capital employed	**Earnings before interest & taxes (EBIT) :-** Profit/(loss) before interest (attributable to long-term borrowing) and tax	**Capital Employed: -** total equity + long term borrowing (including current maturity). Capital employed is worked out based on average i.e. (opening capital employed + closing capital employed) / 2	8.48 %	20.86 %	20.00 %	30.15 %	The major decline in ratio from FY 2018-19 to FY 2019-20 was due to reduction in EBIT because of declining revenue from operations as well as raising finance from banks, financial institutions and directors. However, subsequent improvement in the ratio was mainly due to increase in sales as well as repayment of borrowing.
	(k)	Return on investment.	Net Profit after taxes Average total assets	Net profit after tax	**Average total assets :-** (opening total assets + closing total assets) / 2	2.91 %	5.62 %	3.52 %	9.14 %	The major decline in ratio from FY 2018-19 to FY 2019-20 was due to reduction in net profit because of declining revenue from operations and raising new finance from banks, financial institutions and directors which leads to increase in interest cost. However, subsequent improvement in the ratio was mainly due to increase in sales as well as repayment of borrowing.

OUR PRODUCTS

1. BioDiesel

Biodiesel is a renewable, biodegradable fuel manufactured domestically from vegetable oils, animal fats, or recycled restaurant grease. Biodiesel meets both the biomass-based diesel and overall advanced biofuel requirement of the Renewable Fuel Standard. Biodiesel is a liquid fuel often referred to as B100 or neat biodiesel in its pure, unblended form. Like petroleum diesel, biodiesel is used to fuel compression-ignition engines.

Biodiesel is a clean-burning fuel and safe alternative to replace traditional petroleum diesel. It has high-lubricity and can be a fuel component for use in existing, unmodified diesel engines. This means that no retrofits are necessary when using biodiesel fuel in any diesel-powered combustion engine. It is the only alternative fuel that offers such convenience. Biodiesel acts like petroleum diesel, but produces less air pollution, comes from renewable sources, is biodegradable and is safer for the environment. Producing biodiesel fuels can help create local economic revitalization and local environmental benefits. Many groups interested in promoting the use of biodiesel already exist at the local, state and national level.

BioDiesel Utilization:

- On-Road Vehicles: All Vehicles having Diesel Engine can be powered by Biodiesel without any hassle.
- Off-Road Vehicles: Natural Biodiesel fuel can be used for construction, mining, and farm machinery.
- Marine Vessels: Natural Biodiesel can be used in marine engines safely. Marine use is especially attractive due to the elimination of any possibility for contamination of waterways.
- Stationary Power Generation: With new power generation capacity coming online, Natural biodiesel makes an attractive choice to meet the regulations. Many stationary applications are permitted sources requiring exhaust emission control system, which will work well with biodiesel but will not work with diesel fuel.
- Boiler: With natural gas prices rising high, biodiesel can be substituted easily for natural gas with minor changes necessary to the burner train.
- Hybrid Vehicles: With many states now mandating hybrid electric vehicles (including the fuel cell hybrid), biodiesel will make excellent reforming fuel.
- Lubricity Agent /Additive: Natural biodiesel can also be used as a lubricity agent/enhancer in many applications. It is especially useful in marine applications where water contamination with petroleum lubricity agents can create problems. With the low-sulfur fuel regulation of future, biodiesel can be used as a lubricity additive. A 1-2% biodiesel added to diesel fuel can increase diesel lubricity by 65%.
- Fuel Additive: Biodiesel can also be used as a diesel fuel additive for the purpose of keeping the injectors, pumps and other combustion components clean. A 1-2% blend should be sufficient for this purpose.

2. Veg Ester-Semi Finished

It is a semi-finished Biodiesel and with some further processing converted in to Biodiesel. This can be sold to other processing units for generation of Biodiesel.

3. Glycerin

Glycerol (also known as glycerin) is a major by product in the biodiesel manufacturing process. In general, for every 100 pounds of biodiesel produced, approximately 10 pounds of crude glycerol are created. As the biodiesel industry is rapidly expanding, a glut of crude glycerol is being created.

There are various outlets for disposal and utilization of the crude glycerol generated in biodiesel plants. For large scale biodiesel producers, crude glycerol can be refined into a pure form and then be used in food, pharmaceutical, or cosmetics industries. For small scale producers, however, purification is too expensive to be performed in their manufacturing sites. Their crude glycerol is usually sold to large refineries for upgrading.

PROCESS DESCRIPTION

1) **Procurement of Feed Stocks:** The production of Biodiesel requires three principal feed stocks;

- **Oil:** Oils & Fats that are used currently for biodiesel production are different vegetable oil and its derivatives such as Palm sterein/Palm – other fatty acids, Animal tallows oil and waste vegetable oil (which is often used soybean oil).
- **Alcohol:** Although a variety of alcohols can be used to produce Biodiesel, such as, ethanol, methanol, isopropyl or butanol, we will focus on methanol as it is most readily available, and most frequently used (the reaction is also more complicated with larger alcohols, because of formation of chemical water in the process). Therefore the Biodiesel produced is referred to as methyl esters. Methanol is one of the most common industrial alcohols; because of its abundant supply it's most often the least expensive alcohol as well and its dehydrating qualities. We often use a Co-Solvent process for stubborn feed oils.
- **Catalyst:** The third reactant needed is a catalyst that initiates the reaction and allows the esters to detach. The strong base solutions typically usedare sodium hydroxide (NaOH) and potassium hydroxide (KOH).

2) **Feedstock Pretreatment:**

Common feedstock used in biodiesel production include yellow grease (recycled vegetable oil), "virgin" vegetable oil, and tallow. Recycled oil is processed to remove impurities from cooking, storage, and handling, such as dirt, charred food, and water. Virgin oils are refined, but not to a food-grade level. Degumming to remove phospholipids and other plant matter is common, though refinement processes vary. Water is removed because its presence during base-catalyzed transesterification results in the saponification (hydrolysis) of the triglycerides, producing soap instead of biodiesel.

A sample of the cleaned feedstock is then tested via titration against a standardized base solution, to determine the concentration of free fatty acids present in the vegetable oil sample. The acids are then either removed (typically through neutralization), or are esterified to produce biodiesel or glycerides.

3) **Transesterification & Separation:**

The transesterification process is a reversible reaction and carried out by mixing the reactants – fatty acids, alcohol and catalyst. A strong base or a strong acid can be used as a catalyst. At the industrial scale, mostly sodium or potassium methanolate is used. The end products of the transesterification process are raw biodiesel and raw glycerol. In a further process these raw products undergo a cleaning step. In case of using methanol as alcohol FAME (fatty acid methyl ester) biodiesel is produced. At this step by product glycerol gets separated from the raw biodiesel.

4) **Washing:**

Purification of crude biodiesel is mandatory for the fuel to meet the strict international standard specifications for biodiesel. Biodiesel is conventionally purified using water and dry washing technologies. Water could eliminate the remaining sodium salts and soaps formation; this is due to their water solubility. Although water washing is efficient, it is associated with problems such as increase in production time and cost of production, and difficulty in removing biodiesel from water.

5) **Drying:**

Dry washing is another most regularly used technology in the dynamics of biodiesel purification process. The dry washing procedure is waterless, improves fuel quality, is simple to incorporate into existing plant, reduces washing time and zero waste-water, minimizes total surface area coverage of wash tank, and saves space. It was found by that dry washing procedure for the refining of crude biodiesel decreases cost of production and lowers production time.

Filed by M/s. Yamuna Bio Energy Pvt. Ltd. (Group Company) and Mr. Gaurang Shah (our Managing Director and Promoter)

Special civil application no. 13055 of 2020 filed by M/s. Yamuna Bio Energy Pvt. Ltd. & Another (Mr. Gaurang Shah) [the petitioner] against Union of India and Others [respondent] pending in the High Court of Gujrat at Ahmedabad, District Surat dtd. 14.10.2020
Background of the petition: Search proceedings were conducted at the premises of the petitioner by the SGST department on 30.09.2020 and issue of applicable tax rate was raised after the scrutiny of the records of the petitioners. On 03.10.2020, the SGST authorities also issued summons to the petitioners regarding the issue.

On 12.10.2020, the CGST authorities also raided the premises of the petitioners on the same issue of applicable tax rate. In this respect the petitioner raised objection under section 6(2)(b) of the CGST Act according to which "once an officer of the SGST department has initiated proceedings in respect of any subject matter then the office of the CGST department shall not initiate proceedings with respect of same subject matter.

Aggrieved by the duplicate adjudication of both the authorities and also by the search and seizure procedures undertaken by the authorities, the referred petition was made by the petitioner.

In response to the said petition, the respondent (CGST and SGST authorities) vide affidavit in reply dtd. 19.12.2020 filed reply as under:

The Director General of GST Intelligence (DGGI), Regional Unit, Vapi indicated that certain petroleum Oils and other chemicals falling under HSN Code 27, have been purchased by the Petitioner having GSTIN 24AAACY6792Q1ZG, and on such purchases, ITC have been availed and utilized by them, whereas the petitioner have no evidence no record of having utilize the said petroleum oils/ Chemicals of HSN Code 27 neither they have cleared the said goods on payment of applicable GST nor the stock is available with them. The Petitioner is engaged in the manufacturing of Bio Diesel (B-100) falling under HSN Code 3826.

Further the respondent alleged that M/s. Khadayat Oleo Chem (hereinafter referred to as the firm, which is closed as on date), a proprietorship firm of M/s. Bhaviniben Shah, one of the directors of M/s. Yamuna Bio Energy Private Limited and Kotyark Industries Limited having GSTIN 24BFNPS1486R1ZG has indulged in only paper transactions with M/s. Yamuna Bio Energy Pvt. Ltd. and M/s. Kotyark Industries Limited having GSTN 08AAGCK3927K1Z7 in the Dist. Sirohi, Rajasthan. As per the respondent, there was no physical movement of the goods as the firm is registered at the residential Flat at First Floor and no additional place of business has been declared in their GST Registration. However, since the unit of Kotyark Industries Ltd. falls outside the jurisdiction of the department and hence the same had been out of the purview of the matter.

However, with regard to M/s. Yamuna Bio Energy Pvt. Ltd, and M/s. Khadyata Oleo Chem the respondent has allegations that there has been huge shortage of Petroleum Oil / Base Oil of Chapter Heading no. 27 of a quantity of 2,10,65,181 Ltrs valued at Rs. 95,09,20,117/- in which ITC / GST amounting to Rs. 17,11,65,621/- is involved. Therefore, as per the respondent, either the tax payers have cleared the said petroleum Oil/Base Oil valuing Rs. 95,09,20,117/- without payment of applicable GST or have taken fake invoices only for the purpose of availing ITC. Accordingly, as per the respondent, the present petition has been filed to avoid the ongoing investigation in the matter and the liability of GST worked out on the basis of shortage of raw materials.

In view of same, the respondent has prayed for denial of relief given in the matter and to allow the investigation. It has also been prayed to allow investigation against M/s. Kotyark Industries Limited which is in the state of Rajasthan and outside the jurisdiction of SGST, Gujarat. The matter was last listed on 15.03.2021.

Upon submission of an Application Form with the SCSB, whether in physical or electronic mode, each ASBA Applicant shall be deemed to have agreed to block the entire Application Amount and authorized the Designated Branch of the SCSB to block the Application Amount, in the bank account maintained with the SCSB.

Applicants must specify the Bank Account number, or the UPI ID, as applicable, in the Application Form. The Application Form submitted by applicant and which is accompanied by cash, demand draft, cheque, money order, postal order or any mode of payment other than blocked amounts in the ASBA Account, may not be accepted. The SCSB or Sponsor Bank shall keep the Application Amount in the relevant bank account blocked until withdrawal/ rejection of the application or receipt of instructions from the Registrar to unblock the Application Amount.

However, Non Retail Applicants shall neither withdraw nor lower the size of their applications at any stage. In the event of withdrawal or rejection of the Application Form or for unsuccessful Application Forms, the Registrar to the Issue shall give instructions to the SCSBs to unblock the application money in the relevant bank account within one day of receipt of such instruction. The Application Amount shall remain blocked in the ASBA Account until finalisation of the Basis of Allotment in the Issue and consequent transfer of the Application Amount to the Public Issue Account, or until withdrawal/ failure of the Issue or until rejection of the application by the ASBA Applicant, as the case may be.

Please note that, in terms of SEBI Circular No. CIR/CFD/POLICYCELL/11/2015 dated November 10, 2015 and the SEBI (Issue of Capital and Disclosure Requirements) Regulations, 2018, all the investors (except Anchor Investors) applying in a public Issue shall use only Application Supported by Blocked Amount (ASBA) process for application providing details of the bank account which will be blocked by the Self Certified Syndicate Banks (SCSBs) for the same. Further, pursuant to SEBI Circular No. SEBI/HO/CFD/DIL2/CIR/P/2018/138 dated November 01, 2018 and all related circulars issued thereafter, Retail Individual Investors applying in public Issue may use either Application Supported by Blocked Amount (ASBA) facility for making application or also can use UPI as a payment mechanism with Application Supported by Blocked Amount for making application.

On the Designated Date, the SCSBs shall transfer the amounts allocable to the ASBA Applicants from the respective ASBA Account, in terms of the SEBI Regulations, into the ASBA Public Issue Account. The balance amount, if any against the said Application in the ASBA Accounts shall then be unblocked by the SCSBs on the basis of the instructions issued in this regard by the Registrar to the Issue.

In case of applications made by using any of channels under UPI Payments Mechanism, post closure of the Offer, the stock exchange will share the Application details with the Registrar along with the final file received from the Sponsor Bank containing status of blocked funds or otherwise, along with the ASBA Account details with respect to applications made by RIIs using UPI ID.
The RTA, based on information of Applications and blocking received from stock exchange, would undertake reconciliation of the Applications data and block confirmation corresponding to the Applications by all investor category applications (with and without the use of UPI) and prepare the basis of allotment.

Upon approval of basis of allotment, RTA will share the debit file with Sponsor bank (through Stock exchange) and SCSBs, as applicable, for credit of funds in the public issue account and unblocking of excess funds in the RIIs account. The Sponsor bank based on the mandate approved by the RII at the time of blocking of funds, will raise the debit / collect request from RIIs bank account, whereupon the funds will be transferred from RIIs account to public issue account and remaining funds, if any, will be unblocked without any manual intervention by RII or his / her bank.

Upon confirmation of receipt of funds in the public issue account, shares would be credited to the RII's account. RII will be notified for full/partial/no allotment. For partial allotment the remaining funds would be unblocked. For no allotment, mandate would be revoked and application amount would be unblocked for the RII.

UNBLOCKING OF ASBA ACCOUNT

On the basis of instructions from the Registrar to the Issue, the SCSBs shall transfer the requisite amount against each successful ASBA Applicant to the ASBA Public Issue Account as per section 40(3) of the Companies Act, 2013 and shall unblock excess amount, if any in the ASBA Account.
